TWENTY-FIFTH REGISTRATION REPORT.

1866.

PUBLIC DOCUMENT..... .....No. 1.

TWENTY-FIFTH REPORT

TO THE

LEGISLATURE OF MASSACHUSETTS,

RELATING TO THE

Registry and Return

OF

BIRTHS, MARRIAGES, AND DEATHS,

IN THE

COMMONWEALTH,

For the Year ending December 31, 1866.

PREPARED UNDER DIRECTION OF THE

SECRETARY OF THE COMMONWEALTH,

WITH EDITORIAL REMARKS

BY GEORGE DERBY, M. D.,

University Lecturer on Hygiene in Harvard University.

BOSTON:

WRIGHT & POTTER, STATE PRINTERS,

No. 4 Spring Lane.

1868.

128902

Commonwealth of Massachusetts.

SECRETARY'S OFFICE, BOSTON, April 6, 1868.

To the Honorable Senate and House of Representatives.

In compliance with the requirements of the laws of the Commonwealth, I have the honor to submit herewith the Annual Report relating to BIRTHS, DEATHS and MARRIAGES in Massachusetts, which have occurred during the year ending December 31, 1866, and have been returned, according to law, from the several cities and towns. This volume constitutes the Twenty-Fifth Annual Report upon the subject of the Registration of Births, Marriages and Deaths in Massachusetts.

The accompanying editorial remarks and observations have been prepared by GEORGE DERBY, M. D., of this city, Surgeon of the City Hospital, to whom the Commonwealth is also indebted for like services in the preparation of the Report for 1865. His familiarity with the details of the undertaking and previous acquaintance with the subject have undoubtedly enabled him to present such deductions from the Tables as will render the present not inferior in value or interest to any Report of previous years.

*

The present document, while embracing Tables upon the same subjects, and formulated after similar plans with those of former years, contains also new features of interest. The abstract of the Census of Massachusetts, taken by State authority in 1865, having been issued during the past year, has for the first time been made available in the preparation of the Report, and constitutes a part of the Tables.

A new and elaborate Table, exhibiting the PARENTAGE of all persons deceased during the past registration year, is now first incorporated with the Report and presented to the public, and may be found at page 48. This Table will afford opportunity for comparison of the relative mortality among those of Foreign or American Parentage, and for securing information upon certain contested points which it has not heretofore been practicable to obtain—the returns from the several cities and towns, until recently, not having included the place of birth of the parents of deceased persons among the subjects of inquiry to be recorded or reported to this department.

It will be perceived that more than usual attention has in the present Report been devoted to the discussion of the means of *preventing* disease. The editorial observations upon this important subject will be found instructive and valuable.

Special pains have been taken the past year to secure accuracy and completeness of the Returns from the

towns, by correspondence or personal communication with those disposed to delinquency in any respect. The laborious duties of the clerks in this office, in the preparation of the tables composing the bulk of this document, have been performed with great care and fidelity, and with a view to scrupulous accuracy.

In the Preface to the Report of the previous year, (1865,) it was mentioned that the Registration Reports of Massachusetts are constantly increasing in value, and have attained a high reputation at home and also in Europe. Allusion was also made to the fact that the methods employed here have repeatedly served as models for adoption in other States. During the past year a similar application received from another State, for information in regard to our Registration System, and for specimens of the blanks and documents employed in connection therewith, has furnished like testimony in favor of the plans here adopted.

Respectfully submitted.

OLIVER WARNER,
Secretary of the Commonwealth.

TWENTY-FIFTH REGISTRATION REPORT.

(1866.)

A quarter of a century has now passed since these Annual Reports of the social life of Massachusetts were commenced. The history of one generation, at least, is on record. The three most important events in the life of every individual within our borders if occurring during this period, are clearly set forth, attested, indexed, and filed away in the office of the secretary of the Commonwealth for reference and use by all who may seek such information. The records of family Bibles may be lost and destroyed, but here are the *originals*, which, like the deeds of real estate at the registry, establish the birth, marriage and death title of every man, woman and child in Massachusetts, to be used in law, or in any way in which it may be important to prove the fact. This to the individual is often of extreme value and importance; but to the Commonwealth of which he is a member, the aggregation of such a mass of facts gives rise to questions of the most interesting character, and furnishes answers to problems which have always perplexed the minds of men, and whose solution was not possible in any other way. "Public health is public wealth," expresses the practical view which Benjamin Franklin entertained of what is now known as the science of *Sanitary Economy*, resting on the secure foundation of vital statistics, but which in his day did not exist. In a letter of his, written in 1751, and entitled, "Observations concerning the increase of mankind, peopling of countries, &c.," he expresses his strong interest in the subject, and in the absence of definite figures and facts, gives his opinions upon the number and fertility of marriages, the probable increase of population, and many other kindred matters. Before the end of Franklin's century, the advance of civilization began to strongly influence the opinion of the world upon the needless sacrifice of life dependent upon the neglect of public health. Political economists saw the waste, and philanthropists saw the suffer-

ing; but the absence of vital statistics was a bar to much real progress, since no one could demonstrate what many intelligent minds perceived. At the present day every civilized country has adopted a system of registration more or less complete. By such records we can clearly see the comparative duration of life in different countries, and in the various parts of any country; the influence of density of population and of various occupations upon mortality; the immunity of certain districts from certain diseases, and are thus put upon the direct and certain road to a final discovery of their causes; the distribution of certain diseases between the sexes, the influence of seasons, and of age. Physicians gain through registration the invaluable guide to judicious treatment of disease which is based upon the epidemic constitution of the season, or the year,—a doctrine taught by Sydenham, but which in his day it was very difficult to apply, for the want of certain knowledge what the drift of the period really was. Now-a-days we find in the English medical journals weekly reports from the registrar's office pointing out the causes of all deaths in the great cities. In Boston, the city registrar informs the public every Saturday what diseases are prevailing; and we are so accustomed to such information that it is not always recognized how valuable it is, how difficult it would be to gain any approach to such definite knowledge in any other way, and how it disarms epidemics of imaginary terrors. It is an index pointing steadily at the essential fact, and as much to be depended upon as the thermometer or the wind-vane.

The classification and analysis of death-returns on a large scale have become a study by themselves, and susceptible of uses still greater and more varied as their number increases; and their value is perhaps equally great to statesmen and physicians. It has always been the reproach of medicine that its rules of practice are vague. This is a consequence of the complex organism with which it deals; but vital statistics, by taking a more comprehensive view of disease, by regarding the human mechanism, not in the individual but in communities, extinguishes many errors, and shows us the influences which effect public health in such a manner that we can claim to be exact in our conclusions. Yet in the interpretation of figures derived from vital statistics, it is important to remember the great liability to error in unskilful hands. Not every one can illustrate the truths of chemistry by

experiment. A defect in the apparatus, or a want of delicate tact in the management of materials, may apparently contradict the laws of nature and chemical affinity. Statistical figures are equally sensitive, and require equally careful treatment. An important difference between the two, however, is found in the fact that if the chemical experiment fails we know it; if the statistical experiment fails we very likely do not. Yet the laws governing both are equally definite. Much unmerited discredit has been brought upon statistical argument from the causes to which we have referred. It is even a common saying that "anything may be proved by figures." Yet how untrue this is may be readily seen by our constant and habitual reliance upon them in the common affairs of life. Commerce, all industrial interests, finance and political economy are seen to be directly dependent upon that grouping together in numerical form of large numbers of ascertained facts to which is given the name of statistics. The great interests of life insurance are securely based upon life-tables derived from just such facts as are presented in this volume. The medical profession is very largely indebted for the progress it is now making in the knowledge of disease to this department of science. No mere theory of disease can gain anybody's attention. To be considered at all, it must be based upon proved and admitted facts of the exact sciences, and upon numerous and careful observations. Thus many important rules of practice have been demonstrated and brought into the clear sunlight of universally admitted truth by statistical comparisons.

Public health is now recognized in Great Britain as one of the most useful departments of government, and the work which was there commenced only about thirty years ago has proceeded ever since with constantly increasing interest on the part of the people, and has been the means of already accomplishing very striking results. What is now doing there is made evident not only by the Registration Reports, but also by the annual reports of the medical officer of the Privy Council, Mr. John Simon, through whom a vast amount of information is collected in the most careful manner by medical officers who investigate by government authority all subjects bearing upon the health of communities, and visit and report upon all places whose condition can be improved by their labors. In this country the prevention of disease is becoming a popular subject, and its practicability is

recognized by many minds. Popular conviction will finally lead to a reform of many unwholesome conditions of cities and towns which are now permitted to exist; but these conditions must first be proved dangerous by the logic of facts.

The first step in the prevention of disease is the discovery of its exciting causes, and these must be demonstrated so that all intelligent minds can clearly see them; and this is a work not of a year and perhaps not of a generation. While dealing with the tables of this Report we are on firm ground. Facts like these are worth the finding, however troublesome it may be to collect them, and however wearisome to collate and digest them when grouped together in the form of figures. They must be examined with the single purpose of extracting any useful truth they may contain, and with a complete disregard of all theories or conjectures previously entertained. When this is done we are on the high road to useful and practical results, though the way may be a long one. All declamation on such subjects is worse than useless. When men tell us that here in Massachusetts the race is degenerating, and that women are physically inferior to their grandmothers, and they know the reason why, we must ask them to prove their first proposition before expatiating on their second. The final answer to such inquiries is to be looked for in the patient accumulation of observations made by those who seek truth for its own sake, wherever it may be found and wherever it may lead. Many valuable truths have already been discovered in the vital statistics of this and other countries during the past quarter of a century, and many are yet concealed which will one day see the light. In searching for them, hasty conclusions are to be avoided, and when perplexed with numerical statements which seem to lead to no useful result, we must be content to wait until additional observations, and time, the great corrector of errors, have had opportunity given them to separate the false from the true, and to bring what is now obscure into the clear light of day.

The last five Registration Reports of Massachusetts have had to deal with a state of war. Happily we have now returned to the condition of peace which existed in 1860. During the whole period, from 1861 to 1865 inclusive, the normal relations of births, deaths and marriages have been singularly perverted. The war and its influences entered every household, killing its members, preventing marriages, and in a still greater degree affecting births,

by removing from their families those who would otherwise have become the fathers of children. During 1865 this unusual condition ceased, and we have now, for the first time in six years, a state of peace, the effects of which on the natural increase of population are abundantly evident in the statements we have now to make.

The whole number of names registered in eighteen hundred and sixty-six was eighty-six thousand five hundred and seventy-eight. These are divided as follows: Thirty-four thousand and eighty-five (34,085) children were born alive, of which number seventeen thousand four hundred and thirty-eight (17,438) were males, and sixteen thousand six hundred and forty-seven (16,647) were females.

Fourteen thousand four hundred and twenty-eight (14,428) couples, or twenty-eight thousand eight hundred and fifty-six (28,856) persons were married. Of this number eight thousand six hundred and fourteen (8,614) were purely American marriages, and five thousand eight hundred and fourteen (5,814) were marriages either of foreigners exclusively, or in which one party was foreign.

The whole number of deaths was twenty-three thousand six hundred and thirty-seven (23,637,) of which eleven thousand six hundred and seventeen (11,617) were males, and twelve thousand and twenty (12,020) were females.

Comparing these numbers with the previous year we find the following changes, all of a most gratifying character:—

The births have increased by . . .	3,836
The marriages have increased by . .	1,376
The deaths have diminished by . . .	2,525

The number of births is greater than in any year since 1861. The number of deaths has not been so small since 1862. The number of marriages is greater than has ever before been recorded.

The natural increase of population, or the excess of births over deaths, for 1866, is ten thousand four hundred and forty-eight, and is 6,351 greater than in 1865.

The population of the State being, by the census of 1865, 1,267,031, one living child was born to every 37·17 persons; one

person in every 43·91 was married; one person in every 53·60 died.

The average number of births daily was . .	93·38
The average number of marriages daily was .	39·53
The average number of deaths daily was . .	64·76

The percentage of births, deaths and marriages in 1866 was as follows:—

Births, ...	2·690
Persons married, ...	2·278
Deaths, ...	1·865

The excess of the birth-rate over the death-rate was ·825 of one per cent.

In the ten years preceding the war the deaths of females exceeded those of males. In 1861 the deaths of females were still slightly in excess. During the four following years of war the deaths of males predominated. We find in 1866 the deaths of females again exceeding those of males by 402.

The births have increased in every county except Dukes. The marriages have increased in every county except Barnstable and Nantucket, in Norfolk the number remaining the same. The deaths have diminished in every county except Middlesex.

The average age of those who died was 30·92 years, an increase of 2·24 years over 1865.

Throwing out Dukes and Nantucket, where the numbers are so small as to have no significance, the average age at death varies from 25·65 in Suffolk, where are found the greatest number of children of foreign parents, to 35·36 in Berkshire, 35·97 in Barnstable, 38·07 in Franklin, and 40·04 in Plymouth.

TABLE showing the Number of BIRTHS, MARRIAGES and DEATHS Registered in Massachusetts during the past ten years.

YEARS.	Births.	Marriages.	Deaths.	Excess of Births over Deaths.	Births to 100 persons.	Deaths to 100 persons.	Excess of Births in 100 persons.
1857, . .	35,320	11,739	21,280	14,040	3 01	1·82	1·19
1858, . .	34,491	10,527	20,776	13,715	2·89	1·74	1·15
1859, . .	35,422	11,475	20,976	14,446	2·92	1·73	1·19
1860, . .	36,051	12,404	23,068	13,983	2·93	1·87	1·06
1861, . .	35,445	10,972	24,085	11,360	2·86	1·96	·90
1862, . .	32,275	11,014	22,974	9,301	2·62	1·86	·76
1863, . .	30,314	10,873	27,751	2,563	2·42	2·22	·20
1864, . .	30,449	12,513	28,723	1,726	2·42	2·28	·14
1865, . .	30,249	13,051	26,152	4,097	2 38	2 06	·32
1866, . .	34,085	14,428	23,637	10,448	2·69	1·86	·83

The above table shows very clearly the effect of the return of peace. The deaths sink to the ratio of 1860. The births do not rise so immediately; but when we remember the number of men in the prime of life who have been killed during the war, it is not surprising that this should be the case.

POPULATION.

Since the publication of the Registration Report for 1865, the census for that year, made by State authority, containing many valuable tables and much interesting information, has been issued from the Secretary's office. From this it appears that the total population of the State was 1,267,031. Males, 602,010; females, 665,021.

The numbers in the several counties in three successive semi-decades, together with the gain or loss since 1860, are shown in the following table:—

POPULATION by Counties for 1855, 1860, 1865.

COUNTIES.	1855.	1860.	1865.	Increase.	Decrease.
Barnstable, . .	35,442	35,990	34,610	-	1,380
Berkshire, . . .	52,791	55,120	56,944	1,824	-
Bristol, . . .	87,425	93,794	89,395	-	4,399
Dukes, . . .	4,401	4,403	4,200	-	203
Essex, . . .	151,018	165,611	171,034	5,423	-
Franklin, . . .	31,652	31,434	31,340	-	94
Hampden, . . .	54,849	57,366	64,570	7,204	-
Hampshire, . .	35,485	37,823	39,269	1,446	-
Middlesex, . .	194,023	216,354	220,384	4,030	-
Nantucket, . .	8,064	6,094	4,748	-	1,346
Norfolk, . . .	94,367	109,950	116,306	6,356	-
Plymouth, . . .	61,495	64,768	63,107	-	1,661
Suffolk, . . .	171,841	192,700	208,212	15,512	-
Worcester, . .	149,516	159,659	162,912	3,253	-
Totals, . .	1,132,369	1,231,066	1,267,031	45,048	9,083

This census, it should be remarked, was taken just at the close of the war, when large numbers were still absent from their homes, many of whom, doubtless, escaped enumeration. The chief losses are in the seaboard counties, which furnished a large number of men for the naval service in addition to those who served in the army. The tendency of population during the past few years, however, has been strongly towards the manufacturing centres, and this will account in a degree for the increase of Suffolk, Hampden, Norfolk, Essex and Middlesex, at the expense of Bristol, Plymouth, Nantucket and Barnstable.

The following table, prepared for the State census report, by Dr. Edward Strong, gives an interesting view of the advance of Massachusetts in population during the past century:—

Population of Massachusetts, by Counties, at various periods during the past 100 *years.*

COUNTIES.	Date of Incorporation.	State Censuses.		United States Censuses.								St. Census.
		1765.	1776.	1790.	1800.	1810.	1820.	1830.	1840.	1850.	1860.	1865.

Several tables in the Census Report are given to show where the increase and decrease of population during the past fifteen years has occurred, and from these it appears that between 1855 and 1865 one hundred and sixty-six towns decreased in population. We called attention last year to the fact that between 1820 and 1840 eighty towns lost population, and between 1840 and 1850 the aggregate number of people in one hundred and fifty-nine towns was stationary, and these same towns gained only 5·06 per cent. between 1820 and 1840.

With reference to the increase and decrease during the past ten years, Dr. Strong says, in the Census Report: "The increase has been confined almost entirely to the manufacturing towns, or to those in the vicinity of Boston. In nearly all the counties the smaller towns are losing population, the larger cities and towns at the same time increasing, and the statement that all the larger towns are becoming manufacturing towns would be nearly the truth."

The following table, from the Census Report, shows the centralizing tendency in a striking way:—

Population at recent Periods, and Percentage of Increase of Boston, and of the Cities and Towns within Three Miles, and Six Miles, respectively.

	TOWNS.	POPULATION.				PERCENTAGE OF INCREASE.				
		1850.	1855.	1860.	1865.	1850*–1855.	1855*–1860.	1860*–1865.	1850–1860.	1855–1865.

* Five years only.

The indirect effects of the war upon population are seen with more or less distinctness in all recent reports; but the census shows the direct effect in a marked diminution of adult males between the ages of 20 and 60. Thus, instead of 266,049 in 1860, we find 249,806 in 1865. Their numbers had diminished by 16,243, in spite of a gain to the general population of 35,965. This is a serious loss, coming as it does exclusively from the producing or "bread-winning" class, and its effect upon births will also be at once perceived.

The following table, from the Census Report, shows the ages of the people of Massachusetts at several different periods:—

Ages of Population at Six Censuses, 1830–1865, *and Percentage of the same.*

YEARS.		Under 5.	5 to 10.	10 to 15.	15 to 20.	20 to 30.	30 to 40.	40 to 50.	50 to 60.	60 to 70.	70 to 80.	80 to 90.	90 to 100.	Over 100.	Age unk.	Aggregate.

Ever since the first census of 1765 there has been found an excess of females over males in Massachusetts. The disparity has increased somewhat rapidly since 1850, when the difference in numbers amounted to 17,264.

In 1855 it was	31,629
1860 it was	36,959

But in 1865, this had increased to 62,420, the percentages being,

Males, ...	47·52
Females, ...	52·48

It would be very interesting to recognize the different races and their relative proportions in the population of Massachusetts, but we can see no sure and certain way of arriving at this result. Previous to 1825 nearly all the people of the State were the descendants of emigrants from England, most of whom came over in the seventeenth and early part of the eighteenth century. Probably few communities of equal size were more homogeneous than the inhabitants of Massachusetts in the half century following the revolutionary war. About 1830 the Irish began to pour in upon us; then the Germans and British Americans; and very recently the natives of the Western Islands, classed as Portuguese. The Irish have prospered and multiplied, intermarrying with Americans to some extent, and in the second and third generation they cannot readily be distinguished from the descendants of the Puritans. It is not possible for the census-takers to distinguish race, and if those whom they interrogate claim to be Americans, as they certainly are in one sense, they must have their claim allowed. We can only distinguish with certainty the birthplace of the inhabitants, and sometimes, but not always, the birthplace of their parents. Classed according to nativity, the census of 1865 shows that 999,976 of our people were born in the United States, 265,486 were born in other countries, and the birthplace of 1,569 was unknown. Of the 999,976 Americans, 828,156 were born in Massachusetts, and 171,720 in other of the United States.

Of the 265,486 foreign born, 183,177, or more than two-thirds of the whole number, were born in Ireland, 32,390 in British America, 25,229 in England, 11,125 in Germany, 6,967 in Scotland, 1,883 in Portuguese possessions, and 1,110 in France.

The distribution and relative strength to the whole population of the foreign born in Massachusetts at three different periods, are shown in the following table from the Census Report:—

Numbers and Percentage of Foreign Population at the Periods, 1855, 1860, 1865.

STATE AND COUNTIES.	FOREIGN POPULATION.			PERCENTAGES.		
	1855.	1860.	1865.	1855.	1860.	1865.

Worcester, . .	29,315	31,876	32,240	19·61	19·96	19·79

From this it would appear that the proportion of foreign born is diminishing. That the proportion of foreign *race* is increasing seems, however, very probable, although it is not readily demonstrated for the reasons before given. The race which originally peopled New England is still leaving the old homesteads, as it has been doing for a century past, and founding new States in the far West, or seeking their fortunes in foreign lands.

Some idea of the extent of this emigration from Massachusetts, as well as the immigration to Massachusetts from other parts of the Union, may be obtained from the following table, compiled from the census of the general government for 1850 and 1860. It proves, at least, what a roving people we are:—

Number of Natives of Massachusetts in other States, and of Natives of other States in Massachusetts, 1850 *and* 1860.

Emigrated to, — from Massachusetts.		States and Territories.	Emigrated from, — to Massachusetts.

BIRTHS.

The following table exhibits the number of births which have been registered in Massachusetts during the past fifteen years:—

YEAR.	Born alive.	Stillborn.	YEAR.	Born alive.	Stillborn.
1852, . . .	29,802	598	1860, . . .	36,051	1,062
1853, . . .	30,920	568	1861, . . .	35,445	1,017
1854, . . .	31,997	558	1862, . . .	32,275	907
1855, . . .	32,845	725	1863, . . .	30,314	903
1856, . . .	34,445	695	1864, . . .	30,449	856
1857, . . .	35,320	739	1865, . . .	30,249	859
1858, . . .	34,491	747	1866, . . .	34,085	1,046
1859, . . .	35,422	733			

The population being 1,267,031, the birth-rate for 1866 (excluding stillborn,) is 2·69 per cent. There was one living birth to every 37·17 persons; or, if we include stillborn, one birth to every 36·06 persons.

It is of great importance to discover, if possible, whether this number of births is such as might reasonably be expected in a year of peace and general prosperity. In England, during the twenty-six years, 1838–1863, with a population of about eighteen millions, the average birth-rate was 3·33. In Massachusetts it has never been so high. In the seven years, 1852–1858, it was 2·90. In the five years immediately preceding the war, 1856–1860, it was 2·85. 1861 was a transition period, and the birth-rate was 2·85. During the four years of war, 1862–1865, the birth-rate was 2·46. We find it now rising, not to the old standard of 2·85 or 2·90, but to 2·69. Why is this? An explanation may be found by comparing the numbers of people of an age to have

children who existed in Massachusetts in 1860 and 1865. Thus, in 1860, there were between the ages of fifteen and fifty, 323,119 males and 350,927 females. In 1865 there were between these ages, 307,784 males and 363,267 females. There was a relative loss of 15,335 men, and a relative gain of 12,340 women. In other words, the disparity between the sexes at marriageable ages had increased from 27,808 in 1860, to 55,483 in 1865. If we can imagine a compulsory union in 1866 of all unmarried persons in Massachusetts between the ages of fifteen and fifty, 55,483 women would remain *for whom no partners existed*, and this number is twice as great as it would have been but for the war. These considerations seem to be sufficient to account for a deficiency of 2,265 births in 1866, that being the number required to bring the birth-rate up to 2·87, which we may regard as the standard rate from 1852 to 1860.

In judging of the state of a community by its vital statistics, it is always to be remembered that its birth-rate, taken by itself, is of little value as an index to its prosperity, healthfulness, and the enjoyment of normal conditions. The true tests are the death-rate, and the difference between the birth-rate and death-rate. This difference gives the natural increase, supposing the community to be fixed, and subject to no changes from emigration or immigration. The birth-rate is generally found high in communities subject to unwholesome influences. A crowded and dirty and degraded population is usually a prolific one. St. Giles, in London, produces a larger percentage of children than the rural districts, and also a larger percentage than the average of all England. The same is true of Lancashire, with its crowded factory towns, and Liverpool, the most unhealthy city in England.

On the other hand, a community in the enjoyment of ease and comfort, possessing the means of maintaining health by *cleanliness* in all its forms (including in this term clean air, water and food,) and particularly a community which is intelligent, and whose brain is active and employed, will not have a high birth-rate, but its death-rate will be universally found to be low, and the number of children which it brings to maturity greater than one in which they are more abundant, and in which healthful conditions are wanting.

The birth-rate of Massachusetts cannot fairly be contrasted with that of any European country, for several reasons. Our people

are, as regards race, heterogeneous. The people of England and of France and of Germany are each homogeneous, or if there was formerly a diversity of race, time has accomplished a fusion such as cannot exist here while immigration continues. All strata of society are in each of the countries of Europe of essentially the same stock. With us, however, the upper and middle classes are almost exclusively of one race, enjoying the comforts of life, living in good houses, well clothed and fed, and with habits of personal cleanliness. They are also a brain-working people, if such a people exists on the face of the earth. The lower classes of society in Massachusetts, those who do the hard work, the unskilled laborers, the hewers of wood and drawers of water, are almost exclusively foreigners, and chiefly Irish. They live for the most part in crowded neighborhoods, and under conditions well known to be unfavorable to health and long life.

Their birth-rate is seen in certain wards of the city of Boston, where this class largely predominates. In Ward 7, the present year, it was 4·27, and in Ward 12, 3·60. This, it will be observed, is very high, the rate for the State being 2·69; and from such observations it has often been suggested that the Celtic race is more prolific in America than the Anglo-American. This may be so, but it is well for us to note that in St. Giles, and in Lancashire, and wherever in England is found a crowded and dirty population, there the birth-rate is also much above the average, notwithstanding the race is the same throughout all classes of society.

Our Anglo-Americans are also migratory, while the people of Europe do not wander about their own country, but remain for the most part where they were born. We have seen what numbers come to Massachusetts from other parts of the Union, and what still greater numbers are constantly going from us to carry civilization and to build up new States in the most distant parts of our territory. For these reasons the birth-rate of Massachusetts cannot fairly be compared with that of a stationary and homogeneous community. Its natural increase is also less distinctly seen, but taking the six years before the war, it stands 1·09 per cent., against 1·10 in England. This increase, we do not doubt, will continue when time has been allowed for recovery from the effects of the war, by a restoration of something like the old relations between the numbers of the sexes.

It may be interesting to see what so wise a man as Benjamin Franklin thought about these and similar matters when vital statistics were unknown. In 1751, he writes as follows: "Tables of the proportion of marriages to births, of deaths to births, of marriages to the number of inhabitants, &c., formed on observations made upon the bills of mortality, christenings, &c., of populous cities, will not suit countries; nor will tables formed on observations made on full-settled old countries, as Europe, suit new countries, as America. For people increase in proportion to the number of marriages, and that is greater in proportion to the ease and convenience of supporting a family. When families can be easily supported, more persons marry and earlier in life. Great part of Europe is full settled with husbandmen, manufacturers, &c., and therefore cannot now much increase in people. America is chiefly occupied by Indians, who subsist mostly by hunting. But as the hunter, of all men, requires the greatest quantity of land from whence to draw his subsistence (the husbandman subsisting on much less, the gardener on still less, and the manufacturer requiring least of all,) the Europeans found America as fully settled as it well could be by hunters; yet these having large tracts were easily prevailed on to part with portions of territory to new comers, who did not much interfere with the natives in hunting, and furnished them with many things they wanted. Land being thus plenty in America, and so cheap as that a laboring man that understands husbandry can in a short time save money enough to purchase a piece of new land sufficient for a plantation, whereon he may subsist a family, such are not afraid to marry; for if they even look far enough forward to consider how their children, when grown up, are to be provided for, they see that more land is to be had at rates equally easy, all circumstances considered. Hence marriages in America are more general, and more generally early than in Europe; and if in Europe they have but four births to a marriage, (many of their marriages being late,) we may here reckon eight; of which, if one-half grow up, and our marriages are made, reckoning one with another, at twenty years of age, our people must at least be doubled every twenty years." Further on he says: "A nation well regulated is like a polypus; take away a limb, its place is soon supplied; cut it in two, and each deficient part shall speedily grow out of the part remaining. Thus, if you have room and subsistence enough

as you may by dividing make ten polypuses out of one, you may, of one, make ten nations, equally populous and powerful; or, rather, increase a nation tenfold in numbers and strength."

Has not Massachusetts been increasing these last hundred years like Franklin's polypus? And if the population within our State boundaries has not doubled every twenty years, would not his prediction prove to be true if we counted the territory which has been settled by natives of our soil?

The statement that in Dr. Franklin's opinion people married in the middle of the last century at the age of twenty, and had an average of eight children to a marriage, of which *about one-half grew up*, is a very interesting one, and as near to the truth as we are likely to get.

LIVING BIRTHS, and numbers living to one Birth in the different Counties in 1866.

COUNTIES.	Population in 1865.	Living Births.	Numbers living to one Birth.
Barnstable,	34,610	796	43·48
Berkshire,	56,944	1,587	35·88
Bristol,	89,395	2,291	39·02
Dukes and Nantucket,	8,948	144	62·14
Essex,	171,034	4,638	36·87
Franklin,	31,340	612	51·21
Hampden,	64,570	1,792	36 03
Hampshire,	39,269	973	40·36
Middlesex,	220,384	5,973	36·89
Norfolk,	116,306	3,114	37·35
Plymouth,	63,107	1,624	38·86
Suffolk,	208,212	6,027	34·55
Worcester,	162,912	4,514	36·09
Whole State,	1,267,031	34,085	37·17

From this table it appears that the counties were prolific in the following order: Suffolk, Berkshire, Hampden, Worcester, Essex, Middlesex, Norfolk, Plymouth, Bristol, Hampshire, Barnstable, Franklin, Dukes and Nantucket. The counties containing large towns and cities, as usual, produce the largest percentage of children to population, the exception this year being Berkshire. The island counties seem to be always far behind. The census shows in those counties a much larger proportion of persons past middle age. In Dukes and Nantucket, 26·3 per cent. of the population are over 50 years of age; in the State at large, 15.5 per cent. This is doubtless owing to emigration of the young people.

The following table shows the births in the several quarters of the year, and the birth-rate for each quarter, supposing it to have been maintained through the year:—

BIRTHS in Massachusetts.—*Quarterly Rates.*

PERIOD.	Numbers.	Percentage.
Quarter ending with March, ...	7,206	2·275
June, ...	8,012	2·529
September, ...	9,251	2·920
December, ...	9,616	3·036
Whole year, ...	34,085	2 690

From this it appears that there were 3,649 more births in the last half of the year than in the first half; that there was an increase in each quarter over the preceding quarter, and that the two middle quarters exceeded the two extreme quarters. A comparison in these respects with previous years is given in the next table.

BIRTHS arranged in periods of Six Months.

YEARS.	Two first Quarters.	Two last Quarters.	Two middle Quarters.	Two extreme Quarters.	Extreme Difference.
1861, . . .	16,644	18,756	17,973	17,427	2,112
1862, . . .	15,308	16,938	16,058	16,188	1,630
1863, . . .	14,338	15,952	15,022	15,268	1,614
1864, . . .	14,052	16,366	15,190	15,228	2,314
1865, . . .	14,136	16,113	15,090	15,159	1,977
1866, . . .	15,218	18,867	17,263	16,822	3,649
Average, . .	14,950	17,165	16,097	16,015	2,215

It will be seen that the difference between the first two and last two quarters is a very unusual one.

Sex.—The next table exhibits the number and proportions of the sexes for fifteen years.

		1866.	1852-65.
Born alive,	Males, ...	17,394	235,755
	Females, ...	16,603	222,459
	Not stated, ...	88	1,823
Males to 100 Females, ...		104·7	105·9
Stillborn, .	Males, ...	545	5,944
	Females, ...	410	3,992
	Not stated, ...	91	1,998
Males to 100 Females, ...		132·9	148·9
Illegitimate,	Males, ...	147	1,196
	Females, ...	131	1,222
	Not stated, ...	3	28
Males to 100 Females, ...		112·2	97·9

The proportion of males to females is this year a little below the average. Males greatly outnumber females, as usual, among

the still-births. The illegitimate children have generally shown an excess of females; this year it is reversed.

BIRTHS by Counties.—*Proportion of Males to Females.*

COUNTIES.	Males, per cent.	Females, per ct.	Males to 100 Females.	COUNTIES.	Males, per cent.	Females, per ct.	Males to 100 Females.
Barnstable, .	51·40	48·60	106	Hampshire, .	50·98	49·02	104
Berkshire, . .	53·12	46·88	113	Middlesex, .	50·88	49·12	103
Bristol, . .	51·03	48·97	104	Norfolk, . . .	50·58	49·42	102
Dukes & Nantucket, .	49·31	50·69	97	Plymouth, . .	51·94	48·06	108
Essex, . .	52·90	47·10	112	Suffolk, . .	50·04	49·96	100
Franklin, . .	51·55	48·45	106	Worcester, .	50·45	49·55	102
Hampden, . .	51·93	48·07	108	Whole State,	51·16	48·84	105

The proportions are quite different in the counties. These variations are not of importance, however, and depend apparently only on the numbers in each county for each year being insufficient to prove the general law which furnishes a nearly constant result in the State at large, and which is equally true of the counties when several years are taken together. Thus, last year Berkshire showed a smaller proportion, and Dukes and Nantucket a larger proportion of male births than the average. This year it is reversed in both counties.

EXHIBIT OF THE PARENTAGE *of the Children born alive, in several classes, which were Registered in the several Counties of Massachusetts during the year* 1866.

* Two cases of triplets occurred in 1866—one in Suffolk and the other in Worcester County.

The preceding table shows that 975 more children were born to parents exclusively foreign than to parents exclusively American; that 2,798 children were born of mixed parentage, and that the difference between those of purely American parentage and those of foreign and mixed parentage, was 3,773.

Percentages of American and Foreign LIVING BIRTHS *during the past Eighteen Years.*

	Average of five y'rs. 1849-53.	Average of five y'rs. 1854-58.	Average of five y'rs. 1859-63.	1864.	1865.	1866.
American, . .	63·02	50·38	46 06	44·91	44·53	44·42
Foreign, . . .	35·96	44·12	46·89	47 62	47·40	47·30
One party foreign, .	1·02	5·50	7·05	7·47	8 07	8·28

The rapid relative increase of foreign births, which was going on during the fifteen years preceding 1864, is checked, and the two races, in so far as they can be distinguished by such classification, are now increasing equally, or very nearly so, the difference in three years being only ·17 of one per cent. The proportion of mixed births is, however, growing slightly greater each year, the difference amounting in three years to ·81 of one per cent.

The foreign-born population of Massachusetts by the census of 1865 was 265,486; the American population, 999,976, and the population of unknown nativity, 1,569. These latter it is not easy to divide. It seems probable that very many were of foreign birth, yet if divided in proportion to the numbers whose nativity is given, about four-fifths would be called Americans. It seems nearer the probable truth to divide them equally. We have then 1,000,761 Americans, and 266,270 foreigners. And they produced in 1866,—the Americans, 16,555 children, the foreigners, 17,530 children; that is to say, a child was born to every 60·45 Americans, and to every 15·19 foreigners,—the latter class being four times as productive as the former. It would be interesting to know the proportion of the sexes, and the numbers at marriageable ages of the American and foreign population, but these facts are not given by the census. We must also not fail to

remember that the children born on our soil, *of whatever parentage*, help to make up the million of native Americans above referred to.

That the foreigners are more prolific than the Americans seems to be proved. That they are more prolific *because* they are of another race, is certainly not proved. They live under conditions which have been found everywhere to promote fertility, and it is extremely probable that if the two classes could exchange places their productiveness would be reversed. Of the mortality of the Americans and foreigners (the really important point in all questions relating to their probable future influence,) we shall have occasion to speak when considering deaths.

Plural Births.—The whole number was 708. Two women gave birth to triplets (one in Suffolk, the other in Worcester County,) and three hundred and fifty-one women gave birth to twins in 1866. The parentage was as follows: American, 41·81 per cent.; foreign, 49·15 per cent., and mixed, 9·04 per cent. The sexes conform very nearly to those of all the births, being 51·13 males to 48·87 females.

The frequency of plural births in a series of years, shows in a striking way the operation of general laws of nature. Thus, in ten years, 1856–65, one case of twins occurred to every 104 births, and one case of triplets to every 10,453 births. In 1866, one case of twins occurred to every 96 births, and one case of triplets to every 16,865 births.

Illegitimates.—The number was 281, or ten more than last year; 155 of American, and 126 of foreign origin. It is supposed that all of these cases are not reported.

Stillborn.—The number reported (1,046) was above the average of the past ten years, 187 more than last year, though less than in 1860. It is very probable that many are concealed. The percentage of stillborn to the whole number of births in 1866 was 3·07, or one stillborn to every 33 births.

MARRIAGES.

The number in 1866 was 14,428, the largest ever reported in Massachusetts, and 1,376 more than in 1865.

The number for nine years is given in this table:—

MARRIAGES registered in Massachusetts, 1858–1866.

	1866.	1865.	1864.	1863.	1862.	1861.	1860.	1859.	1858.	Average, '58-65.
Marriages, . .	14,428	13,052	12,513	10,873	11,014	10,972	12,404	11,475	10,527	11,604
Persons married,	28,856	26,104	25,026	21,746	22,028	21,944	24,808	22,950	21,054	23,208

There were 2,824 more marriages in 1866 than the average of the preceding eight years. There was one marriage to every 87·82 persons, or one person was married to every 43·91. The percentage of marriages to population was 1·139. In 1865 it was 1·030. The large increase in marriages since the close of the war is an assurance of general prosperity, and of the hopeful condition of the people. In 1863, when our national affairs looked darkest, and the calls for more soldiers were most frequent, marriages fell to 10,873. Three years later we find them increased 33 per cent.

MARRIAGES in Massachusetts.—*Quarterly Aggregates and Percentages.*

	1st quarter.	2d quarter.	3d quarter.	4th quarter.
Year 1866, ...	3,057	3,751	3,151	4,441
Years 1856-66, ...	28,151	32,927	30,004	38,340
Quarterly percentages, 1866, .	21·23	26·05	21·88	30·84
Quarterly percentages, 1856-66,	21·75	25·44	23·19	29·62

The last quarter always returns the largest number of marriages, as "Thanksgiving" in November is a favorite season for

this ceremony. In 1865 there was a progressive increase through the four quarters; but in 1866 there is a return to the usual average proportions, the last quarter being greatest, the second quarter next, the third quarter next, and the first quarter least in numbers. The smallest number in any month is, as usual, in March.

MARRIAGES of persons under thirty-five years of age, during eight years, 1859–66.—*Percentages.*

	1859.	1860.	1861.	1862.	1863.	1864.	1865.	1866.
Males, .	84·17	83·67	83·45	81·76	80·92	82·42	81·60	83·18
Females, .	91·26	94·18	91·04	91·04	90·77	91·93	90·60	91·57

The percentage of males marrying under thirty-five, it will be perceived, has returned to about the point at which it stood before the war. The percentage of females has not been affected.

MARRIAGES in Massachusetts.—*Rates by Counties.*

COUNTIES.	MARRIAGES TO 100 LIVING.			PERSONS LIVING TO 1 MARRIAGE.		
	1852-64.	1865.	1866.	1852-64.	1865.	1866.
Barnstable, .	0·746	1·095	1·038	123	91	96
Berkshire, .	0·820	0·969	1·001	120	103	88
Bristol, . .	0·854	1·001	1·085	116	100	92
Dukes, . .	0·816	1·024	1·048	123	98	95
Essex, . .	0·937	1·031	1·206	107	97	83
Franklin, . .	0·729	0·912	0·960	135	109	104
Hampden, .	1·219	1·089	1·256	83	92	79
Hampshire, .	0·862	0·929	1·176	117	108	85

Nantucket, .	0·730	1·159	1·095	145	86	91
Norfolk, . .	0·755	0·788	0·788	133	127	127
Plymouth, .	0·746	0·952	0·966	135	105	103
Suffolk, . .	1·320	1·398	1·453	78	69	68
Worcester, .	0·912	0·958	1·143	110	104	87
Whole State,	0·865	1·030	1·139	116	97	88

The highest marriage-rate, as well as the highest birth-rate, are found in Suffolk County. The proportion of marriages in Norfolk County seems remarkably small, and we can only account for it by supposing that a large number of its people are married in the city of Boston. There has been an increase of marriages in every county except Barnstable and Nantucket, where the differences are trifling, and in Norfolk, where the number remains the same as last year.

The marriage-rate for the State is 1·139. One marriage took place for every 88 living, or one person was married for every 43·91 living.

The social condition of those who married in 1866 is shown, in so far as they were stated by the returns, in the following tables:

AGES *at Marriage of* 14,343 MEN *and of* 14,311 WOMEN.

SEX.	Under 20.	20 to 25.	25 to 30.	30 to 35.	35 to 40.	40 to 45.	45 to 50.	50 to 55.	55 to 60.	60 to 65.	65 to 70.	70 to 75.	75 to 80.	Over 80.

AGES *at Marriage of* 11,832 BACHELORS *and of* 12,554 MAIDS.

Bachelors, . .	279	5,195	4,292	1,356	453	141	72	23	17	4	–	–	–	–
Maids, . . .	2,753	6,195	2,475	654	274	112	50	24	11	4	2	–	–	–

AGES *at Marriage of* 2,465 WIDOWERS *and of* 1,718 WIDOWS.

Widowers, . .	–	69	259	443	451	366	308	202	158	112	53	30	11	3
Widows, . .	19	218	382	374	286	190	107	57	38	15	21	9	2	–

It appears from these tables that the average age of all the men who married during the year was 29·1 years, and of all the women 25 years.

The average age of men marrying for the first time was 26·4, of women marrying for the first time was 23·6 years.

Social or Conjugal Condition of Persons Married in Massachusetts in the year 1866.

MALES.		FEMALES.				
Number of the Marriage.	Whole Number.	First Marriage.	Second Marriage.	Third Marriage.	Fourth Marriage.	Unknown.
Whole Number, . .	14,428	12,608	1,683	52	2	83
1st Marriage, . . .	11,867	11,094	766	6	1	–
2d Marriage, . . .	2,283	1,432	817	33	1	–
3d Marriage, . . .	180	77	91	12	–	–
4th Marriage, . . .	14	5	8	1	–	–
5th Marriage, . . .	1	–	1	–	–	–
Unknown, ...	83	–	–	–	–	83

The preceding table shows that two women were married for the fourth time, and one of them to a bachelor; that one man married for the fifth time; that six widows who had each lost two husbands married bachelors; and that five men who had each lost three wives married maids.

The conjugal condition of parties married during the past four years is shown by percentages, as follows:—

		First Marriage.	Second Marriage.	Third Marriage.	Fourth Marriage.	Fifth Marriage.	Not stated.
1863,	Males, .	81·89	16·06	1·21	·12	–	·73
	Females, .	88·05	10·80	·38	·04	–	·73
1864,	Males, .	81·78	15·71	1·78	·12	·02	·59
	Females, .	87·26	11·50	·60	·05	–	·59
1865,	Males, .	81·10	16·37	1·76	·14	·01	·62
	Females, .	86·14	12·70	·52	·02	–	·62
1866,	Males, .	82·24	15·80	1·31	·08	·01	·56
	Females, .	87·38	11·66	·36	·01	–	·59

The next table gives the ages at which certain youthful marriages were contracted. They are 536 in number. It will be observed that in some instances the youth was only on one side :—

The purely American marriages have slightly declined; the purely foreign marriages have also slightly declined; and the mixed marriages have increased. We cannot regard these tables as very significant, since the number of persons of foreign extraction, although *born* in America, is known to be so large, and is

every year increasing. The children of Irish parents who came over in great numbers between 1830 and 1850, have now reached marriageable ages, and are recorded as Americans. The process of fusion of races in Massachusetts is becoming more complete with each generation, and the separation into American and foreign classes is attended with greater difficulty and an increased liability to error with each succeeding year. This is not to be regretted, but it makes tables like the preceding of less value than they would have possessed twenty years ago.

DEATHS.

This department of the registration reports is one of direct importance, since it measures, by comparison with the existing population, the condition of public health. Its indications are positive. If pestilence has visited us, here are the certain signs of its extent and its severity. If unusual mortality is found in certain districts, it can be immediately traced to certain diseases; and by careful investigation and comparison of all the circumstances accompanying them, (conditions not readily attained, but *attainable*,) we may reasonably hope to finally arrive at their exciting causes. The next step—to their *prevention*—will be a comparatively easy one. If length of days measures the health of communities, we know by this report how we stand in Massachusetts, and whether we are improving or retrograding. There is much which is gratifying and encouraging in the death report of 1866.

The following table will show how it stands in comparison with the six preceding years:—

DEATHS registered in Massachusetts.—*Numbers.*

	1866.	Average. 1860-5.	1865.	1864.	1863.	1862.	1861.	1860.
Deaths, .	23,637	25,312	26,152	28,723	27,751	22,092	24,085	23,068

The number of deaths (exclusive of stillborn children,) is thus seen to be 2,515 less than in 1865, and 1,675 less than the average of the past six years, and 5,086 less than in 1864, when the war was most destructive.

The death-rate for the year is as follows:—

Deaths to 100 persons living, ...	1·865
Persons living to one death, ...	53·6

DEATH-RATE during the past Six Years.

	1866.	1865.	1864.	1863.	1862.	1861.
Deaths to 100 living,	1·865	2·064	2·280	2·215	1·774	1·946
Living to one death,	54	48	44	45	56	51

In viewing the mortality of different parts of the State, it has, in previous years, been divided into geographical sections, having separate characteristics more marked than those which would be afforded by county lines.

In the table arranged on this plan, the following towns of Middlesex County are classed with Worcester County in the *Midland* Division:—Ashby, Townsend, Pepperell, Shirley, Groton, Dunstable, Tyngsborough, Westford, Littleton, Boxborough, Acton, Stow, Marlborough and Hopkinton. Chelsea, North Chelsea and Winthrop are classed with Essex County in the *North-Eastern* Division.

MORTALITY of Massachusetts in Six Geographical Divisions.—1866.

DIVISIONS.	Population. 1865.	Deaths. 1866.	Deaths to 100 persons living.	Persons living to one death.
1. Metropolitan, (City of Boston,) .	192,318	4,377	2·27	44
2. North-Eastern, (Essex, and parts of Suffolk and Middlesex,) .	379,495	7,362	1·94	52
3. South-Eastern, (Norfolk, Bristol, Plymouth, Barnstable, Dukes and Nantucket,) . . .	312,366	5,196	1·66	60
4. Midland, (Worcester, and part of Middlesex,) . . .	190,729	3,391	1·78	56
5. Valley, (Franklin, Hampshire and Hampden,)	135,179	2,393	1·77	56
6. Western, (Berkshire,) . .	56,944	918	1·61	62

The rate of mortality in a community normally constituted, with an average proportion of persons of all ages, is a measure of

health and of the duration of life. It is therefore a matter of extreme interest to us in Massachusetts to know whether the conditions in which we live are comparatively healthful, and whether we live as long as other people. In England, a standard of normal mortality has been generally recognized to be seventeen in a thousand. This, of course, is but an approximation, and liable to change with succeeding generations. If the hopes of those who count upon an increased duration of life from sanitary reform are realized, it certainly will change; but at present, a mortality of not exceeding seventeen in a thousand is the point aimed at, and hardly ever reached. On referring to the English registration reports, it appears that no county in England has maintained this rate for a series of years. The nearest approach to it has been in Rutlandshire (1·85) and in Westmoreland (1·81.) In both these counties the rate has fallen for a single year below 1·70 per cent., or 17 in a thousand. The rate for all England is about 2·21. It appears from the preceding table, that while the death-rate for the State is, as we have previously seen, 1·86, the rate for the 3d, 4th, 5th and 6th divisions is below this point. Grouping these four divisions together, we find, with a population of 695,218, (55 per cent. of the whole State,) that their death-rate is 1·71. Such results must be regarded as highly satisfactory; and although future generations will doubtless surpass them, it is pleasant to know that the prospect of long life in Massachusetts is at least *as good to-day as that enjoyed by any civilized country.*

DEATHS by Counties.—1866.

COUNTIES.	Population. 1865.	Deaths to 100 living.	Persons living to one death.
Barnstable,	34,610	1·44	69
Berkshire,	56,944	1·61	62
Bristol,	89,395	1·80	55
Dukes,	4,200	1·52	66
Essex,	171,034	1·83	54
Franklin,	31,340	1·59	63
Hampden,	64,570	1·90	52
Hampshire,	39,269	1·69	59
Middlesex,	220,384	1·98	51
Nantucket,	4,748	1·89	53
Norfolk,	116,306	1·65	61
Plymouth,	63,107	1·62	62
Suffolk,	208,212	2·24	45
Worcester,	162,912	1·82	55
Whole State,	1,267,031	1·86	54

In order of healthfulness the counties rank as follows: Barnstable, Dukes, Franklin, Berkshire, Plymouth, Norfolk, Hampshire, Bristol, Worcester, Essex, Nantucket, Hampden, Middlesex, Suffolk.

The death-rate in the principal cities and towns stands as follows:—

Boston,	2·28	Newburyport,	1·39
Lowell,	2·42	Gloucester,	1·83
Worcester,	2·30	Haverhill,	1·70
Cambridge,	1·88	Dorchester,	1·60
Roxbury,	2·00	Pittsfield,	1·42
Charlestown,	2·22	Somerville,	2·42
Springfield,	1·75	Milford,	1·70
Lawrence,	2·36	Newton,	1·27
Salem,	1·95	Abington,	1·32
New Bedford,	1·62	Adams,	1·84
Lynn,	1·90	Fitchburg,	2·16
Fall River,	2·46	Weymouth,	1·63
Taunton,	1·70	Northampton,	2·09
Chelsea,	1·95		

Seasons. DEATHS by Quarters—*Numbers and Percentages.*

	Deaths in 1866.	Percentage.
Deaths registered in the Quarters ending with—		
March,	5,696	24·1
June,	5,260	22·3
September,	6,983	29·5
December,	5,698	24·1

The mortality in the several months was in the following order: August, September, July, March, October, January, November December, April, May, February, June.

Sex.—The return of peace is here again strikingly shown. The proportion of male deaths is greatly diminished. Thus,

In 1862,	the proportions	were	107	males to	100	females.
1863,	"	"	109	"	100	"
1864,	"	"	109	"	100	"
1865,	"	"	100.5	"	100	"
1866,	"	"	97	"	100	"

DEATHS in Massachusetts for 1866—*Ages, Sex, Rates.*

	SEX.	Under 1 year.	Under 5 years.	20 to 30.	All others.	Totals.
Number of deaths,	Males, .	2,581	4,196	1,204	6,201	11,601

	Totals, .	4,672	7,846	2,533	13,225	23,604
Per cent. of deaths of each sex, .	Males, .	22·25	36·17	10·38	53·45	100·
	Females,	17·42	30·41	11·07	58·52	100·
Per cent. for each sex of all deaths,	Males, .	10·10	17·78	5·10	26·27	49·15
	Females,	8·86	15·46	5·63	29·76	50·85
	Totals, .	18·96	33·24	10·73	56·03	100·
Females to 100 males, 1866, .	. .	81·	87·	110·4	113·2	103·5
Females to 100 males, 1865, .	. .	86·4	91·2	107·9	103·6	99·5
Females to 100 males, 1864, .	. .	85·6	88·7	78·8	96·3	91·7

The last table shows, by comparison with the two previous years, what an enormous difference in the mortality of the two sexes, above the age of infancy, was caused by the war, and how the relative mortality has been restored to the proportions which should exist in a state of peace. These changes are so great that the ten years table of rates of mortality of the sexes, which has usually been given in these Reports, is omitted. The periods of war and peace must each stand alone, and the deduction of averages in which both are included, can serve no useful purpose.

It will be seen that whereas in 1864, when the war was at its height, 100 men and 78 women died between the ages of 20 and 30; in 1866 the proportions were changed to 100 men and 110 women. The column including all other ages except those of infancy, shows a change hardly less striking.

The average age of all who died in 1866 was 30·92 years.

The average age of all who died in 1866 over 20 years of age was 52·08 years.

The following list includes all who died in Massachusetts in 1866, aged over 100 years:—

Aged over One Hundred Years—Died in 1866.

Date of Death.	NAME.	Age.	Place of Death.	Birthplace.	Whether previously Married or Single.
Jan'ry 18,	Joanna McCarty,	102	Boston,	Ireland,	Married.
Febr'y 2,	Lucy Cooper,	101	Nantucket,	Africa,	Married, (colored.)
March 9,	Eunice W. Forbes,	103	Ashfield,	Upton, Mass.,	Married.
May 16,	Mary English,	104	Lawrence,	Ireland,	Married.
21,	Joanna Shehan,	100	Tewksbury Almshouse,	Ireland,	Married.
July 5,	Elizabeth Phillips,	102	Boston,	Newburyport, Mass.,	Married, (colored.)
Nov. 16,	Case Brazee,	101	Sheffield,	Unknown,	Married.
17,	Catherine Lynch,	100	Springfield,	Ireland,	Married.
27,	Mary Maguire,	101	Lowell,	Ireland,	Married.

Nativity and Parentage of Persons Deceased.—The value of these tables consists in the fact that through them, and by comparison with corresponding tables of births, we may gain some knowledge of the birth-rate, death-rate, and relative increase of the two great classes of which our population is composed,—the Puritan stock, which settled Massachusetts, and the foreign immigrants, who have come in during the present century. We pointed out in the Registration Report for 1865 the impossibility of attaining this information through the tables of nativity alone, since the deaths of all persons born in America were classed as deaths of Americans, without regard to the birth-place of their parents; and that the great mortality among the young children of foreign parents gave necessarily an entirely erroneous impression as to the mortality of the native and foreign classes. In order to correct this error a table has been made, from an analysis of the original reports from towns, giving the parentage in connection with all deaths. Both tables are printed,—that of *nativity* and that of *parentage*,—as each may help to explain the other.

NATIVITY of persons deceased during thirteen years, 1854–66.

In examining the last table, we are met at the outset by serious difficulties. The number whose parentage is *not stated* (3,460) is more than 14 per cent. of the whole. This defect is partly, no doubt, the fault of the recording town officers, who may have supposed that, as the information thus required had never been analyzed, it did not demand the same care as other parts of the record. It may also proceed from a real difficulty in obtaining the facts, as the friends of the deceased may not know, or be able to ascertain, the parentage. We must take the record as it stands, and do the best we can with it, hoping that in future years it may be more complete.

But this is by no means the only difficulty in drawing conclusions from this table. It might at first appear that a comparison of the foreign births and deaths with the numbers of the foreign population as reported by the census would give the comparative increase of the two classes. But the birth and death reports fix the nationality by the birth-place of the parents, while the census fixes the nationality by the birth-place of those who were enumerated. The census takes the birth-place of the existing population; the birth and death reports go back one generation.

The children of Irish or German parents born on our soil are, in the census, called American, while in the birth and death reports they are called foreign. In point of fact, we have no certain means of knowing how many of the 1,267,031 people in Massachusetts are American or foreign in the sense of the birth and death reports. We can, however, compare the birth and death reports with each other, and from them gain some interesting results.

By dividing the "not stated" equally between the two classes we obtain the following result:—(See birth report, page 26.)

	Births.	Deaths.	Natural Increase. Numbers.
American parentage, ...	16,555	12,196	4,359
Foreign parentage, ...	17,530	11,441	6,089

There are two sources of error, however, in this statement, and which we have no means of correcting. One is that to which we

have referred,—the great number in the death reports whose parentage is unknown. The other is the greater age of the American class. How great this latter difference is will be seen by the following table:—

DEATHS at the Extremes of Life, "not stated" equally divided.

	Under 5 years of age.	Over 60 years of age.
American, ...	3,363	3,521
Foreign, ...	4,514	1,706

Or, omitting the "not stated."

American, ...	2,998	2,910
Foreign, ...	4,149	1,094

From the two tables may be also deduced the following figures, which, placed in direct contrast, show how entirely inadequate to express the fact is the table of nativity taken by itself:—

	Deaths by Nativity Table.	Deaths by Parentage Table.
American, all ages, ...	18,499	10,074
Foreign, "	4,708	9,319
Half Foreign, all ages, ...	–	784
Not stated, "	430	3,460

We see that instead of the American mortality being four times as great as the foreign, as would appear from the nativity table, the two classes stand very nearly together (in so far as parentage is stated,) in their death record, notwithstanding the difference in the numbers of the living, and the greatly superior age of the Americans.

How many American-born children of foreign parents are included in our population? This class must be nearly all under 35 years of age, since foreign immigration in any considerable numbers commenced about 1830.

The number of this class who died in 1866 may be approximated thus: Putting all the "not stated" (or those of doubtful nativity) with the Americans, and equally dividing the half foreign class, the difference between the American and foreign deaths in the two tables stands as follows. The parentage table shows the number of Americans to be 5,003 less, and the number of foreigners to be 5,003 more, than the nativity table. Consequently we may say that *at least* 5,003 of the native-born children of foreign parents died. How many more should be added from the thousands whose parentage is not given, it is impossible to say, but in round numbers 5,000 such deaths are proved.

The whole number of persons in Massachusetts under thirty years of age,* by the census of 1865, was 746,702.

The whole number dying in Massachusetts under 30 years of age in 1866, was 12,851, or 17 in a thousand.

The whole number of native-born children of foreign parents dying in Massachusetts in 1866, was *at least* 5,000, and probably very many more.

These are the only elements available for computing the numbers of the class in question, and they are insufficient to give the desired information. It is not a population of all ages, but all or nearly all are under middle life. The adults have, perhaps, an average chance of life, but certainly the children have not. They live for the most part in crowded towns, and under most unwholesome conditions. Wherever the sanitary conditions are most unfavorable to life, there do these children most abound.

We have seen that the mortality of all classes under thirty years of age was 12,851; and that the mortality among the native-born of foreign parents, supposing them to be all under 30, (and very few can be over that age,) was *at least* 5,000, or 39 per cent. of the whole. It is quite evident the percentage was higher than this, but it cannot be demonstrated. Add to this the mortality of *foreign-born* and we see that the actual number of deaths under thirty years of age must be greater among the foreign than among the native class.

* There are no means of ascertaining the number under 35 years of age.

From the facts above stated the reader must form his own opinion as to the relative strength of the two classes in our population, but we think no one can estimate the numbers of those who were either born in Europe, or are of European parentage, at less than one-third of the whole. Without knowing positively their numbers, no birth-rates or death-rates can be determined. To make them on suppositions would be to put vital statistics to unworthy use.

That both the birth-rate and death-rate of the foreign class is very much higher than the birth-rate and death-rate of the American class is evident. Beyond that point we see no way to draw conclusions with certainty of their correctness.

Every year the difficulty of making lines of division between the (so called) American and foreign classes becomes greater as these classes become more and more mingled and assimilated. If we could imagine both immigration and emigration to cease for two or three generations, (and this is but a trifling period in the lifetime of a nation,) the statist who should then attempt to identify classes derived from the Puritan immigrants of the 17th century, and the Irish and German and British American immigrants of the 19th century, would find it as impossible as it would be found to-day to distinguish the descendants of Saxons, Normans and Danes in the common people of England.

Mortality of Infants in State Almshouses.—There is a very general belief that the unfortunate infants who are either born in the State almshouses or are brought there from any cause, die in unusual numbers. In order to ascertain the facts, which are not completely evident from the registration returns, or from any publications prepared for the legislature, application was made to the superintendents of the almshouses, who furnished for this Report the figures given in the following table:—

CHILDREN under one year of age in the State Almshouses in 1866, and what became of them.

	Bridgewater Almshouse.	Monson Almshouse.	Tewksbury Almshouse.
Existing in Almshouse January 1, 1866, .	37	11	37
Born in the house or received during the year, ...	52	56	201
Totals to be accounted for, . .	89	67	238
Died, ...	21	22	80
Removed or discharged, ...	41	21	109
Remaining in Almshouse Dec. 31, 1866, .	27	24	49
Totals accounted for, ...	89	67	238

The number of nursing children dying in these three almshouses during the year is seen to be, by report of the superintendents, 123 (or according to registration returns 131,) out of a total of 394. This is at the rate of 32 in a hundred, and is certainly not a large percentage from a class of children many of whom are born of diseased parents, and a very large number disowned, deserted, and left alone to the tender mercies of the State. That so few die is very creditable to the superintendents and physicians into whose charge they are committed.

CAUSES OF DEATH.

The weather during 1866, as indicated by temperature and rain-fall, was thus recorded at Amherst and Williams Colleges:—

MEAN TEMPERATURE of the air, and amount of rain-fall for each month of 1866.

	Amherst.		Williamstown.	
	Mean Temperature.	Rain-Fall.	Mean Temperature.	Rain-Fall.
January,	21·93	1·36	19·26	1·01
February,	26·18	4·62	24·85	1·78
March,	31·64	3·16	29·42	1·76
April,	48·63	2·03	46·20	0·75
May,	54·63	4·48	52·33	3·38
June,	65·82	5·66	61·80	4·31
July,	72·91	4·02	69·26	3·70
August,	63·48	3·95	61·41	3·37
September,	60·00	4·71	58·50	4·97
October,	49·50	3·38	45·73	2·37
November,	40·10	3·86	40·20	4·00
December,	26·30	3·57	23·70	3·74
Mean temperature for year,	46·76	–	44·39	–
Total rain-fall,	–	44·80	–	35·14

In considering the causes of death, we find, from year to year, a broad distinction separating the class known as zymotic diseases from all others. Constitutional and local diseases are always with us, and each year we may expect to find a certain number of

victims, not differing greatly in numbers, or percentages to the whole population, from its immediate predecessor. Changes in the rate of mortality from these causes are perceived only by comparison of a series of years. With the zymotic class, however, and particularly in the sub-division known as miasmatic, we find included all the *epidemics*,—diseases which prevail, as the name signifies, "upon or among the people." The immediate influences which propagate and make active these terrible destroyers of life are yet to be discovered. We only know that they are certain forms of fever, attacking large numbers simultaneously; often suddenly leaving a locality and establishing themselves in another which had been previously exempt; each epidemic seeming to have, in each place which it visits, a period of increase and decline, and differing greatly in successive seasons. The mystery which has always concealed the intimate nature of these diseases from the knowledge of man is almost as impenetrable as ever, yet in these latter days a practical observation has been made which seems to bear the test of experience. It is this: that the virulence and destructiveness of this class of diseases is in proportion to the neglect of those provisions which insure to a community *cleanliness* in the broadest sense of that term. An overcrowded population, breathing foul air, will suffer from epidemic diseases in a measure proportioned, in some degree, to the unclean manner in which they live. It is therefore reasonable to suppose that a condition of sound health has more or less power to resist the introduction of these influences, whatever they may be, and of enabling the body which has received them to support the disturbance which they occasion better than a condition of depressed, or feeble, or imperfect health. It also appears that putrefying organic materials, with which the air in crowded and ill-ventilated localities is always charged, have a property of intensifying and making more virulent the epidemic poison, which may be then conveyed in its more active form to other neighboring localities which may be neither crowded nor ill-ventilated.

It is from such considerations that the destructiveness of the zymotic class of diseases is watched all over the civilized world, as an indication, however imperfect, of the real progress which is being made in promoting the public health. The record of Massachusetts in 1866 is in this respect of a gratifying character.

The following table will show how it compares with the two preceding years:—

YEARS.	Dysentery.	Typhus.	Whooping Cough.	Croup.	Diphtheria.	Measles.	Scarlatina.
1864, . .	1,186	1,344	235	768	1,231	320	1,503
1865, . .	1,548	1,694	363	504	672	136	807
1866, . .	949	1,091	287	431	399	109	385

The number of deaths by zymotic diseases was 5,861, which was less than in any year since 1859, and 2,358 less than in 1865. The percentage of deaths by zymotic diseases was only 24·31. In 1865 it was 31·20, and the average for 25 years and 8 months was 28·85.

The percentage of constitutional diseases, including consumption, was 26·64; of local diseases, 26·84; and of developmental diseases, 18·16. All these are relatively a little higher, it is to be observed, from the marked reduction in the percentage of zymotic diseases.

Eighty-six males and eight females lost their lives by railroad accidents; fifty-seven males and sixteen females killed themselves; five males and three females were killed by lightning; twenty-one were lost at sea; one man is reported as murdered; five males and three females were frozen to death; fifty males and forty-five females were burnt to death; thirteen males and eleven females are reported poisoned; one hundred and seventy-one males and thirty females are reported drowned.

The mortality from the ten most destructive diseases in the past six years, with the annual average for the whole period, is given in the following table:—

Order of Succession of Ten Principal Diseases, 1861–6.

1861.	1862.	1863.	1864.	1865.	1866.	Average. 1861-66.	
Consumption,	Consumption,	Consumption,	Consumption,	Consumption,	Consumption,	Consumption, . . .	4,575
Infantile,	Scarlatina,	Pneumonia,	Pneumonia,	Typhus,	Pneumonia,	Pneumonia, . . .	1,514
Pneumonia,	Infantile,	Typhus,	Scarlatina,	Dysentery,	Infantile,	Infantile, . . .	1,323
Cholera Infantum,	Pneumonia,	Diphtheria,	Old Age,	Pneumonia,	Old Age,	Old Age, . . .	1,296
Old Age,	Old Age,	Scarlatina,	Typhus,	Old Age,	Typhus,	Typhus, ...	1,283
Typhus,	Typhus,	Old Age,	Infantile,	Infantile,	Cholera Infantum,	Cholera Infantum, . .	1,126
Scarlatina,	Cholera Infantum,	Infantile,	Diphtheria,	Cholera Infantum,	Dysentery,	Scarlatina, . . .	1,082
Brain Disease,	Brain Disease,	Cholera Infantum,	Cholera Infantum,	Heart Disease,	Heart Disease,	Dysentery, . . .	975
Heart Disease,	Heart Disease,	Dysentery,	Dysentery,	Scarlatina,	Apoplexy and Paralysis,	Diphtheria, . . .	838
Diphtheria.	Diphtheria.	Croup.	Apoplexy and Paralysis.	Diphtheria.	Croup.	Heart Disease, . .	782

The preceding table shows the order of fatality of ten principal diseases as they are classed in the nosological table furnished to the towns. This no doubt is as good and useful a division of diseases as can well be made, yet in a certain view it fails to express all we may wish to know. Thus it appears that if a certain group of diseases, some members of which may be readily mistaken for others and so reported, and all having a certain kinship, be brought together, the result is quite different. Putting together in this way apoplexy and paralysis, (4,366,) insanity, (434,) cephalitis, (3,502,) and brain diseases, (1,693,) we find the aggregate in six years to be 9,995, making the annual average 1,666, or even more than pneumonia. This group, which seems almost as well entitled to stand by itself as consumption, would then rank next to that disease in fatality. This fact seems important to be noted, since it furnishes proof, if any were wanting, that we are a brain-working people in Massachusetts, and that not infrequently this overworked organ shows the effect of the strain which it is made to bear.

The NUMBER *of Deaths from several Specified Causes, of each Sex, in each Month, and at Different Specified Periods of Life, which were registered during the year* 1866.

		Diphtheria.	Dysentery.	Typhus.	Measles.	Scarlatina.	Erysipelas.	Croup.	Cholera Infantum.	Teething.	Consumption.	Pneumonia.

* Diphtheria returned for nine years only.

Diphtheria.—This frightful disease, unknown or unrecognized among us until within about ten years, began to be reported among the causes of death in 1858. It increased rapidly from 18 deaths in that year, to 1,420 deaths in 1863. Since then the decline has been almost equally rapid,—1,231 in 1864, 672 in 1865, and 399 in 1866. The distinction between this disease and croup has always been obscure, and cases of both diseases may be reported under either heading; but the number of deaths from croup has not been correspondingly either decreased or diminished, and it is therefore certain that diphtheria has become very much less fatal, and probably very much less frequent, than three years ago. More than half the cases in 1866 occurred in the counties of Essex, Middlesex, Suffolk and Worcester. The greatest number of cases occurred in January, (50,) and the smallest number in July, (16;) 199 cases were in children under five, and 103 cases in children between five and ten years of age, leaving only 97 above those ages.

Dysentery was much less fatal than usual. Deaths from this cause are divided nearly equally between the sexes. As usual it prevailed during the summer and autumn,—139 cases in July, 340 in August, 225 in September, 103 in October, and 142 in all the other months. Four hundred and ninety-seven, or more than half the decedents, were under five years of age. Essex, (148,) Middlesex, (146,) Suffolk, (140,) and Worcester, (160,) show the largest number of cases. The mortality from dysentery was less than in any year since 1862, and less than the average annual number during the past quarter of a century.

Typhus as well as dysentery was unusually fatal in 1865, but in 1866 the falling off in the death returns of both diseases was equally striking. In place of 1,694 deaths by typhus in 1865, we have only 1,091 in 1866,—523 males and 567 females and one, sex not stated. The largest number of deaths was in October, (146,) and the smallest number in June, (48.) The difference between these two seasons is less than usual, and shows that the disease did not prevail, as it often does in the autumn, as a virulent epidemic. The greatest mortality was, as usual, between the ages of twenty and thirty, but no period of life was exempt. The

distribution of typhus among the counties was not remarkable in 1866.

Measles.—Only 109 fatal cases were reported, equally divided between the sexes. No month was exempt. Eighty-three cases were under five years of age. Seventy of the 109 deaths were in Essex, Middlesex and Suffolk Counties.

Scarlatina visited us very lightly in 1866. Only 385 deaths,—185 males and 200 females,—were reported from this disease, which sometimes claims four times that number.

The percentage to deaths from all specified causes was but 1·58, instead of more than 5 per cent. in 1862, 1863 and 1864, and 3·06 per cent. in 1865. All the counties report cases, but in none did the disease prevail extensively. All but 16 of the cases were under fifteen years of age, and 265 cases were under five. Cases are reported in every month.

Erysipelas.—Under this head are also included seven cases of phlebitis. Seventy-eight males and 69 females are reported. These cases occurred in all the months of the year and at all ages. The number is rather below the average.

Croup.—Two hundred and seven males and 224 females died from this disease. This number is 1·79 per cent. of all deaths from specified causes, which is 0·55 less than the average for the past quarter of a century. It is probable that the treatment of this much dreaded disease is better understood, and that some lives have thereby been saved. Deaths are recorded in every month of the year, the largest number (59) being in January, and the smallest number (19) being in each of the months July, August and September. Three hundred and seventy-nine were under five years of age, 43 between five and ten, and 9 at other ages which should probably have been credited to some other disease. All the counties furnished cases, and in numbers not calling for special remark.

Cholera Infantum caused the death of 576 male and 502 female children, and although cases are reported in each month,

900 occurred in July, August and September. The largest number was in Suffolk County, (273,) next in Middlesex, (231,) and Essex, (164,) while Franklin, Hampshire and Berkshire together report only 53. It is a fatal disease in the counties having a crowded population, while the counties not containing large cities and towns suffer much less. The percentage of all specified deaths in the State at large was 4·47 in 1866, or a little above the average.

Teething.—This very indefinite cause of death is recorded in 220 cases, which is 0·39 of one per cent. less than the average.

Consumption caused the death of 4,600 persons,—2,124 males and 2,476 females; 46·17 per cent. of males and 53·83 per cent. of females.

Although the whole number of deaths is 61 less than in 1865, the percentage to deaths from all causes is 19·08 in 1866, in place of 17·69 in 1865, owing to the greatly diminished number of deaths from zymotic diseases. It is still, however, 1·53 per cent. less than the average percentage for a quarter of a century. The aggregate number is absolutely less than in either of the three preceding years. The mortality in the

First quarter	was	1,153 or 25·06	per cent.	of	the	whole.
Second "	"	1,229 or 26·72	"	"	"

The geographical distribution of consumption was the subject of somewhat extended remarks in the report of 1865, based upon a table showing the mortality from this cause in every town in Massachusetts for ten years. It was found that the disease is very unequally distributed throughout the State. The cause of this unequal distribution was not, however, apparent. In so far as it was possible for a single observer to be acquainted with the conditions of those towns and the different parts of those towns, there was no cause which could be assigned with certainty as a controlling one in the development or the progress of the disease. It is not surprising that this should be the case, but we cannot help believing that a careful comparison and classification of groups of towns in the same vicinity, such as can be made by physicians who are familiar with all the influences bearing upon the health of the inhabitants, will finally lead to important results.

The facts are on record for all who are interested in the subject to compare and apply them.

It is well known to most of our readers, that during the past ten years Dr. H. I. Bowditch, of Boston, has expressed the opinion, based upon very extensive observation, that *soil-moisture* is chief among the causes of consumption in New England, and that localities quite near to each other, and even in the same town and neighborhood, may, chiefly from this cause, be possessed of influences upon this disease quite opposed to each other. These views were expressed by Dr. Bowditch in the annual address delivered before the Massachusetts Medical Society in 1862, and published in their Transactions. A letter recently received from a gentleman travelling in Europe in search of health for a member of his family, gives the impression that the French physicians are aware of some such influences as those described by Dr. Bowditch. He says: "I observe that the resident physicians in the European winter-stations are very apt to proscribe large portions or quarters of their towns. Our doctor here, said we might as well not come to Pau, unless we lived in a certain indicated part of the town. It seems to me that the usages and opinions which prevail in these invalid-stations, confirm the theory that the good and bad places for lung-disease lie close beside each other, distinguished by local conditions of very narrow scope."

A confirmation of Dr. Bowditch's leading idea, and one of a very authoritative character, has recently appeared in the "Ninth Report of the (English) Medical Officer of the Privy Council." It appears that inquiries were ordered in England in 1865 and 1866 into the "effect of drainage works and other sanitary regulations designed to promote the public health." In pursuance of this inquiry, twenty-four towns were selected in which structural sanitary works had been most thoroughly done, and had been longest in operation. These towns were of various sizes,—from 3,000 or 4,000 to 160,000 inhabitants. Tested by mortality records, which were analyzed with the utmost care, it was found by comparison with an equal period of time preceding the sanitary works, that very notable changes in the death-rate from phthisis had taken place since the improvements had been made.

In commenting upon this result, Mr. John Simon, Medical Officer of the Privy Council, says: "These facts appear to indicate a partial dependence of pulmonary phthisis on some of the

unwholesome conditions which have been removed. And when a detailed examination is made of the cases which give that indication, and they are compared with the different class where phthisis has not lessened its amount, the novel and most important conclusion suggests itself, that *the drying of soil which has, in most cases, accompanied the laying of main sewers in the improved towns, has led to the diminution, more or less considerable, of phthisis.*

"The facts which are yet in evidence, seem most strongly to support this conclusion, which, should it be substantiated, will constitute a very valuable discovery, evolved by Dr. Buchanan from the inquiries here reported on.

"In the adjoining table, or in the table which Dr. Buchanan particularly gives to this matter, it will be seen that the reduction of phthisis, where certain works have been executed, is far too large and far too general to be regarded as an accidental coincidence."

The table referred to is here given. In comparing the phthisical death-rate in the first column with the change reported in the second column, the diminution or increase is given by percentages of the previous rate. Thus, in the case of Salisbury, the former rate was $44\frac{1}{3}$ per 10,000 living; the present rate $22\frac{2}{3}$, or 49 per cent. of the former rate.

The phthisical death-rate in Massachusetts in 1866 was 36 per 10,000 living.

TOWNS.	Previous phthisis death-rate, (all ages.) per 10,000 annually.	Degree of Change in Phthisis Death-rate.		Influence of Sewerage works on Sub-soil.
		In Totals.	In Females. 15–55.	
Salisbury, . .	44⅓	—49 per ct.,	?	Much drying.
Ely, ...	32	—47 "	?	" "

Cheltenham, .	28¾	—26 "	—25 "	Some "
Bristol, . . .	33½	—22 "	—18 "	Some "
Dover, . . .	26⅓	—20 "	—18 "	Local "
Warwick, . .	40	—19 "	—10 "	Some "
Croydon, . .	*	—17 "	?	Much "
Cardiff, . . .	34¾	—17 "	?	" "
Merthyr,. . .	38½	—11 "	—12 "	Some recent drying.
Stratford, . .	26⅔	— 1 "	— 4 "	Some local "
Penzance, . .	30¾	— 5 "	0 "	No change.
Brynmawr, . .	28⅓	+ 6 "	— 8 "	No notable change.
Morpeth, . .	30½	— 8 "	+12 "	No change.
Chelmsford,. .	32½	0 "	+11 "	Slight drying.
Penrith, . . .	39⅓	— 5 "	+27 "	No change.
Ashby, . . .	25½	+19 "	—10 "	Some drying.
Carlisle, . . .	32	+10 "	+11 "	Drying, with local defects.
Alnwick, . .	28⅓	+20 "	+36 "	No drying.

* Phthisis and lung diseases together, previously 59½. Reduction of this rate is what is above given.

It will be observed that Mr. Simon speaks of this apparent connection of phthisis with soil moisture as "a very valuable discovery by Dr. Buchanan," and in another place as "a novel and most important conclusion." We are therefore bound to suppose that Mr. Simon had never seen or heard of the address to the Massachusetts Medical Society, published in 1862, and that he had not read the Massachusetts Registration Reports of either 1861 or 1865, in both of which reference is made to the observations of Dr. Bowditch.

Pneumonia.—Eight hundred and thirty-eight males and 801 females died from this disease in 1866. This is 146 more than in 1865. The percentage to all deaths from specified causes is also 1·13 per cent. higher, chiefly from the marked diminution in the deaths from zymotic diseases before referred to.

DEATHS from Pneumonia in the Counties, 1866.—*Percentages.*

COUNTIES.	Percentages to deaths from all specified causes.	COUNTIES.	Percentages to deaths from all specified causes.
Barnstable,	2·9	Hampshire,	8·7
Berkshire,	8·2	Middlesex,	8·1
Bristol,	6·5	Norfolk,	6·6
Dukes and Nantucket,	0·6	Plymouth,	3·8
Essex,	5·5	Suffolk,	7·1
Franklin,	5·9	Worcester,	7·9
Hampden,	5·5		

Order in which the Counties appear with respect to mortality from Pneumonia and Consumption.

PNEUMONIA.	Percentage to deaths from all specified causes.	CONSUMPTION.	Percentage to deaths from all specified causes.
Hampshire,	8·7	Plymouth,	24·63
Berkshire,	8·2	Barnstable,	21·03
Middlesex,	8·1	Essex,	20·70
Worcester,	7·9	Dukes and Nantucket,	19·11
Suffolk,	7·1	Norfolk,	18·97
Norfolk,	6·6	Middlesex,	18·97
Bristol,	6·5	Worcester,	18·79
Franklin,	5·9	Bristol,	18·69
Hampden,	5·5	Franklin,	18 69
Essex,	5·5	Suffolk,	18·14
Plymouth,	3·8	Hampden,	18·01
Barnstable,	2·9	Hampshire,	17 37
Dukes and Nantucket,	0·6	Berkshire,	16·31

It will be observed in the preceding table that the list of counties is almost reversed. In general terms, pneumonia was least fatal where consumption was most fatal, and *vice versa.* This is in accordance with the observations of 1865 and previous years, but it is even more clearly evident in 1866. The mortality from consumption is greatest in the counties bordering on the ocean, and least in the interior counties; the mortality from pneumonia is greatest in the interior counties, and least in the counties bordering on the ocean.

As regards season, the greatest mortality was in March, (232;) next, February, (214;) January, (185;) December, (177;) November, (171.) In these five months 59·7 of the whole mortality from pneumonia occurred. In July, August and September, the deaths were only 167.

As regards age, 612 cases were under five and 589 over fifty years of age. This leaves only 438 between the ages of five and fifty. Although pneumonia attacks all ages indiscriminately, it is seen to be chiefly fatal at the extremes of life.

Sudden, cause unknown,	18	2	–	2	–	4	–	1	1	3	2	–	–	3
Causes not specified,‡	560	12	29	32	2	88	6	49	16	125	55	22	81	43

* Including 94 by "Railroad Accidents."

† *Manner* not stated in the Returns.

‡ Including 66 deaths from "Hemorrhage," 74 from "Tumor," and 37 from "Inflammation."

NOTE.—Where a person is "found drowned," and the coroner cannot ascertain whether the case is a suicide, murder, or purely accidental, the case is classed under "accident or negligence," (V.; 4.) Cases of "neglect" and "cold," except when the result of privation, (Class I.; 3; 1,) are classed with "Violent Deaths," (V.; 6.) As "stricture of the urethra" is almost invariably the result of gonorrhœa, it is classed as (I.; 2; 2.)—[Dr. FARR.]

TABLE X.—CAUSES OF DEATH.—CLASSIFIED ARRANGEMENT.

NUMBERS AND PERCENTAGE.

Exhibiting the registered Number of Deaths from various specified causes (statistically classified) during the five years, 1862–63–64–65–66, *separately and combined, and for the period of twenty-five years and eight months, ending with December* 31, 1866;—*also showing the Number of each Class, Order, and Disease, in each of the stated periods, to* 100 *Deaths from specified causes during such period.*

[Still-births included.]

APPENDIX.

LAWS

CONCERNING THE REGISTRATION OF BIRTHS, MARRIAGES AND DEATHS.

[General Statutes—Chapter 21.]

OF THE REGISTRY AND RETURNS OF BIRTHS, MARRIAGES, AND DEATHS.

SECTION
1. City and Town Clerks to obtain, record, and index facts concerning Births, Marriages, and Deaths.
2. Parents and others to give notice of Births, and Deaths.
3. Physicians to give Certificate of Cause of Death, when requested. Penalty.
4. Sextons, Undertakers, &c., to make returns to Clerks of Cities and Towns. Clerks to give Certificate of Registry of Death to the Person having charge of funeral rites *preliminary* to Interment, for delivery, &c. If Interment takes place without such Certificate, notice thereof to be given, under penalty of twenty dollars.
5. Clerk annually to transmit certified Copies of Records to Secretary.
6. Record or Certificate of Clerk to be *prima facie* evidence in Legal Proceedings.
7. Clerks—Fees of, payable by City or Town; Accounts of, to be certified by Secretary. Penalty for neglect of duty.
8. Superintendents of State Almshouses to record and return to Secretary, births and deaths therein.
9. Secretary to furnish Blank Books for Records and Forms for returns, with Instructions. Clerks to distribute the Blank Forms for Returns.
10. Secretary,—to cause Returns to be bound, &c.; to Report annually to Legislature, &c.; to do all other acts necessary to secure the execution of the provisions of this chapter.
11. Registrars may be chosen, in certain cases, in place of Town Clerks.

SECTION 1. The clerk of each city and town shall receive or obtain, and record, and index, the following facts concerning the births, marriages, and deaths, therein, separately numbering and recording the same in the order in which he receives them, designated in separate columns:

In the record of births, the date of the birth, the place of birth, the name of the child, (if it have any,) the sex and color of the child, the names and the places of birth of the parents, the occupation of the father, the residence of the parents, and the date of the record;

In the record of marriages, the date of the marriage, the place of marriage, the name, residence and official station of the person by whom married, the names and places of birth of the parties, the residence of each, the age and color of each, the condition of each, (whether single or widowed,) the occupation, the names of the parents, and the date of the record;

In the record of deaths, the date of the death, the name of the deceased, the sex, the color, the condition, (whether single, widowed, or married,) the age, the residence, the occupation, the place of death, the place of birth, the names and places of birth of the parents, the disease or cause of death, the place of burial, and the date of the record.

SECTION 2. Parents shall give notice to the clerk of their city or town of the births and deaths of their children; every householder shall give like notice of every birth and death happening in his house; the eldest person next of kin shall give such notice of the death of his kindred; the

keeper of a workhouse, house of correction, prison, hospital, or almshouse, except the State almshouses at Tewksbury, Bridgewater, and Monson, and the master or other commanding officer of any ship shall give like notice of every birth and death happening among the persons under his charge. Whoever neglects to give such notice for the space of six months after a birth or death, shall forfeit a sum not exceeding five dollars.

SECTION 3. Any physician having attended a person during his last illness, shall—when requested within fifteen days after the decease of such person—forthwith furnish for registration a certificate of the duration of the last sickness, the disease of which the person died, and the date of his decease, as nearly as he can state the same. If any physician refuses or neglects to make such certificate, he shall forfeit and pay the sum of ten dollars to the use of the town in which he resides.

SECTION 4. Every sexton, undertaker, or other person having charge of a burial-ground, or the superintendent of burials having charge of the obsequies or funeral rites preliminary to the interment of a human body, shall forthwith obtain and return to the clerk of the city or town in which the deceased resided or the death occurred, the facts required by this chapter to be recorded by said officer concerning the deceased, and the person making such return shall receive from his city or town the fee of ten cents therefor.

The clerk, upon recording such facts, shall forthwith give to the person making such return, a certificate that such return has been made, which certificate such person shall deliver to the person having charge of the interment, if other than himself, before the burial when practicable, otherwise within seven days thereafter. When a burial takes place and no certificate is delivered as aforesaid, the sexton, undertaker, or other person having charge of the interment, shall forthwith give notice thereof to the clerk under penalty of twenty dollars.

SECTION 5. The clerk of each city and town shall annually on or before the first day of February, transmit to the secretary of the Commonwealth, certified copies of the records of the births, marriages, and deaths, which have occurred therein during the year ending on the last day of the preceding December.

SECTION 6. The record of the town clerk relative to any birth, marriage, or death, shall be *primâ facie* evidence, in legal proceedings, of the facts recorded. The certificate signed by the town clerk for the time being shall be admissible as evidence of any such record.

SECTION 7.* The clerk shall receive from his city or town for obtaining, recording, indexing, and returning to the secretary of the Commonwealth, the facts in relation to a birth, twenty cents; a marriage, ten cents; a death, twenty cents for each of the first twenty entries, and ten cents for each subsequent entry, as the same shall be certified by the secretary of the Commonwealth; but a city or town containing more than ten thousand inhabitants may limit the aggregate compensation allowed to their clerk. He shall forfeit a sum not less than twenty nor more than one hundred dollars for each refusal or neglect to perform any duty required of him by this chapter.

SECTION 8. The superintendents of the State almshouses at Tewksbury, Bridgewater, and Monson, shall obtain, record, and make return of,

* See chap. 138, on p. cliv, following.

the facts in relation to the births and deaths which occur in their respective institutions, in like manner as is required of town clerks. The clerks of said towns shall, in relation to the births and deaths of persons in said almshouses, be exempt from the duties otherwise required of them by this chapter.

SECTION 9. The secretary shall, at the expense of the Commonwealth, prepare and furnish to the clerks of the several cities and towns, and to the superintendents of the State almshouses, blank books of suitable quality and size to be used as books of record under this chapter, blank books for indexes thereto, and blank forms for returns, on paper of uniform size; and shall accompany the same with such instructions and explanations as may be necessary and useful. City and town clerks shall make such distribution of blank forms of returns furnished by the secretary as he shall direct.

SECTION 10. The secretary shall cause the returns received by him for each year to be bound together in one or more volumes with indexes thereto. He shall prepare from the returns such tabular results as will render them of practical utility, make report thereof annually to the legislature, and do all other acts necessary to carry into effect the provisions of this chapter.

SECTION 11. Any city or town containing more than ten thousand inhabitants, may choose a person other than the clerk to be registrar, who shall be sworn, and to whom all the provisions of this chapter concerning clerks shall apply. The returns and notices required to be made and given to clerks shall be made and given to such registrar under like penalties.

SECTION 12. The secretary of this Commonwealth shall prosecute, by an action of tort, in the name of the Commonwealth, for the recovery of any penalty or forfeiture imposed by this chapter.

SECTION 13. Any city or town may make rules and regulations to enforce the provisions of this chapter, or to secure a more perfect registration of births, marriages, and deaths, therein.

[General Statutes—Chapter 106.]

OF MARRIAGE.

SECTION
7. Notice of Intention of Marriage to be entered with Town Clerk.
8. Certificate of Record of Intention to be given to Parties by Clerk. Such certificate to be delivered to Person before whom Marriage is to be solemnized.
9. Certificate not to issue to certain Minors, except on application of Parent, &c. Penalty.
10. Clerk may require Affidavit of Age.
11. Penalty for making False Statement.
12. Parties living in State and Married out of it, to file certificate on return. Penalty.
13. No Person to solemnize Marriage of a Minor, without consent of Parents, if any in the State competent to act.

SECTION
14. Marriages, by Whom to be solemnized, and in what Place.
15. Marriages among Quakers.
16. Persons solemnizing Marriage to keep Record and to make Returns to certain Town Clerks. Clerk to record all Marriages so returned.
17. Penalty for not making Returns.
18. Penalty for solemnizing a Marriage unlawfully.
19. Penalty, on Person not authorized to Marry.
21. Record of Marriage, or certified copy thereof, presumptive evidence of Marriage.

SECTIONS 1, 2 and 3. [Marriage between certain relatives prohibited.]

SECTION 4. [Polygamy forbidden.]

SECTION 5. [Marriage contracted by insane persons or idiots, void.]

SECTION 6. [Marriages of persons marrying out of the State in order to evade, &c., void.]

SECTION 7. Persons intending to be joined in marriage, shall, before their marriage cause notice thereof to be entered in the office of the clerk, or registrar of the city or town in which they respectively dwell, if within the State. If there is no such clerk or registrar in the place of their residence, the entry shall be made in an adjoining city or town.

SECTION 8. The clerk or registrar shall deliver to the parties a certificate under his hand, specifying the time when notice of the intention of marriage was entered with him, together with all facts in relation to the marriage required by law to be ascertained and recorded, except those respecting the person by whom the marriage is to be solemnized. Such certificate shall be delivered to the minister or magistrate in whose presence the marriage is to be contracted, before he proceeds to solemnize the same.

SECTION 9. If a clerk or registrar issues such certificate to a male under the age of twenty-one years, or a female under the age of eighteen years, having reasonable cause to suppose the person to be under such age, except upon the application or consent in writing of the parent, master, or guardian, of such person, he shall forfeit a sum not exceeding one hundred dollars; but if there is no parent, master, or guardian, in this State, competent to act, a certificate may be issued without such application or consent.

SECTION 10. The clerk or registrar may require of any person applying for such certificate, an affidavit sworn to before a justice of the peace for the county where the application is made, setting forth the age of the parties; which affidavit shall be sufficient proof of age to authorize the issuing of the certificate.

SECTION 11. Whoever applying for such certificate wilfully makes a false statement in relation to the age or residence, parent, master, or guardian, of either of the parties intending marriage, shall forfeit a sum not exceeding two hundred dollars.

SECTION 12. When a marriage is solemnized in another State between parties living in this State, and they return to dwell here, they shall, within seven days after their return, file with the clerk or registrar of the city or town, where either of them lived at the time, a certificate or declaration of their marriage, including the facts concerning marriages required by law, and for every neglect they shall forfeit ten dollars.

SECTION 13. No magistrate or minister shall solemnize a marriage, having reasonable cause to suppose either of the parties to be under the age mentioned in section nine, without the consent of the parent or guardian having the custody of the minor, if there is any in the State competent to act.

SECTION 14. Marriages may be solemnized by a justice of the peace in the county for which he is appointed, when either of the parties resides in the same county; and throughout the State by any minister of the gospel ordained according to the usage of his denomination, who resides within the State and continues to perform the functions of his office; but all marriages shall be solemnized in the city or town in which the person solemnizing them resides, or in which one or both of the persons to be married reside.

SECTION 15. Marriages among the people called Friends or Quakers may be solemnized in the manner heretofore used and practised in their societies.

SECTION 16. Every justice of the peace, minister, and clerk, or keeper of the records of the meeting wherein any marriages among the Friends or Quakers are solemnized, shall make a record of each marriage solemnized before him, together with all facts relating to the marriage required by law

to be recorded. He shall also between the first and tenth days of each month return a copy of the record for the month next preceding, to the clerk or registrar of the city or town in which the marriage was solemnized, and shall when neither of the parties to a marriage resides in the city or town in which the marriage is solemnized, return a copy of the record of such marriage to the clerk or registrar of the city or town in which one or both of said parties reside. All marriages so returned shall be recorded by the clerk or registrar.

SECTION 17. Every person neglecting to make the returns required by the preceding section, shall forfeit for each neglect not less than twenty nor more than one hundred dollars.

SECTION 18. A justice of the peace or minister who joins persons in marriage contrary to the provisions of this chapter, knowing that the marriage is not duly authorized, shall forfeit not less than fifty nor more than one hundred dollars.

SECTION 19. Whoever undertakes to join persons in marriage knowing that he is not authorized so to do, shall be imprisoned in the jail or confined to hard labor for a term not exceeding six months, or pay a fine of not less than fifty nor more than two hundred dollars.

SECTION 20. [Unintentional informality does not invalidate marriage in other respects lawful.]

SECTION 21. The record of a marriage, made and kept as prescribed by law by the person before whom the marrriage is solemnized, or by the clerk or registrar of any city or town, or a copy of such record duly certified, shall be received in all courts and places as presumptive evidence of such marriage.

SECTION 22. [Admission of respondent, general repute, &c., competent evidence to prove the fact of marriage.]

SECTION 23. [Marriage in foreign countries by a consul or diplomatic agent valid, and certificate of such consul or agent presumptive evidence thereof.]

[General Statutes—Chapter 29.]

OF THE PUBLIC RECORDS.

SECTION 10. [County, city and town records and files may be inspected and copied.]

SECTION 13. [Penalties; . . . . . for altering or mutilating any record, paper, or written document, a sum not exceeding fifty dollars, —for wrongfully detaining records, and other documents, fifty dollars.]

[General Statutes—Section 1 of Chapter 174.]

Sentence when no punishment is provided.

SECTION 1. In cases of legal conviction, where no punishment is provided by statute, the court shall award such sentence as is conformable to the common usage and practice in this State, according to the nature of the offence, and not repugnant to the constitution.

[Chapter 138.]

AN ACT CONCERNING THE REGISTRY AND RETURN OF MARRIAGES, BIRTHS AND DEATHS.

SECTION 1. The clerk of each city and town, (except in such cities and towns as choose a registrar, under the eleventh section of the twenty-first chapter of the General Statutes, in which cases the provisions of this act shall apply to the registrar,) for receiving or obtaining, recording, indexing and returning the facts relating to marriages, births and deaths occurring therein, shall be entitled to receive therefrom the sums following, viz.: for each marriage, fifteen cents; for each birth, thirty cents; for each death returned to him by the persons specified in sections two, three and four of chapter twenty-one of the General Statutes, twenty cents for each of the first twenty entries, and ten cents for each subsequent entry; for each death not so returned, but by him obtained and recorded, twenty cents.

SECTION 2. Chapter ninety-six of the acts of the year eighteen hundred and sixty-five, and so much of section seven of the twenty-first chapter of the General Statutes as is inconsistent herewith, are hereby repealed.

SECTION 3. This act shall take effect upon its passage.

[*Approved April* 7, 1866.

STATISTICAL NOSOLOGY

ADOPTED FOR REGISTRATION IN MASSACHUSETTS.

The following plan of a Nomenclature and Classification of Diseases does not essentially differ from that authorized by the Registrar-General of England, to be used in the preparation of the "Weekly Return of Births and Deaths in London," and is also, with slight modifications, identical with that embodied in a report drawn up by William Farr, Esq., M. D., of London, for the consideration of the International Statistical Congress which met at Paris in September, 1855; which report was printed in the Appendix to the Sixteenth Registration Report of the Registrar-General, England.

[NOTE.—This page and those that follow contain two lists of causes of death. The first,—that on the left side,—may be called the TABULAR LIST, and comprises all the heads which it is proposed to admit into the complete tables (IX. and X.) and under which ALL deaths, from whatever cause are finally distributed. It represents those diseases which, under the same terms, or terms strictly synonymous with them, are found in practice to occur most frequently.

The SUPPLEMENTAL LIST is *subordinate* to the first, and contains the principal *special* diseases which it may be considered desirable to note. The figures in this list indicate the corresponding heads of the tabular list under which such diseases are ultimately arranged.

Table VIII. includes both the Tabular and Supplementary lists; Tables IX. and X. the Tabular list only.]

CAUSES OF DEATH.

TABULAR LIST.	SUPPLEMENTAL LIST. *Of Diseases of Special Character, or rarely fatal.*
CLASS I. ZYMOTIC DISEASES.	
ORDER 1.—*Miasmatic.*	
I. 1.—1. Smallpox,	I. 1.—1. Vaccination, not stated. Smallpox, (2d attack.) After vaccination. Erysipelas, &c., after vaccination. Chickenpox. Miliaria.
2. Measles,	
3. Scarlatina,	3. Angina maligna. Diphtheria.
4. Quinsy,	4. Mumps.
5. Croup,	
6. Whooping Cough,	
7. Typhus (and Infantile Fever,)	7. Typhoid Fever.
8. Erysipelas,	8. Phlebitis. Pyemia. Hospital gangrene. Erythema.
9. Metria (or Puerperal Fever,)	
10. Carbuncle,	
11. Influenza,	
12. Dysentery,	
13. Diarrhœa,	
14. Cholera Infantum,	
15. Cholera,	
16. Ague,	
17. Remittent Fever,	17. Yellow fever.
18. Rheumatism,	18. Rheumatism, with pericarditis, or disease of heart.

CAUSES OF DEATH—(Continued.)

TABULAR LIST.	SUPPLEMENTAL LIST.
CLASS I.—(Continued.)	
ORDER 2.—*Enthetic.*	
I. 2.—1. Syphilis,	I. 2.—1. Gonorrhœa. Purulent ophthalmia. 4. Necusia, (usually from dissection wounds.) Malignant pustule.
2. Stricture of Urethra,	
3. Hydrophobia,	
4. Glanders,	
ORDER 3.—*Dietic.*	
I. 3.—1. Privation,	I. 3.—1. Want of Breast Milk. 2. Rickets. Bronchocele.
2. Purpura and Scurvy,	
3. Delirium tremens, } (Alcoholism,)	
4. Intemperance, } (Alcoholism,)	
ORDER 4.—*Parasitic.*	
I. 4.—1. Thrush,	I. 4.—2. Porrigo. Scabies. Tape worm. Hydatids.
2. Worms, &c.,	
CLASS II. CONSTITUTIONAL DISEASES.	
ORDER 1.—*Diathetic.*	
II. 1.—1. Gout,	II. 1.—3. Soft cancer. Sweep's cancer. Melanosis. Other kinds of cancer. Polypus (part not stated.) Lupus. 5. Bed-sore. Dry gangrene.
2. Dropsy and Anæmia,	
3. Cancer,	
4. Noma (or Canker,)	
5. Mortification,	
ORDER 2.—*Tubercular.*	
II. 2.—1. Scrofula,	II. 2.—1. Psoas abscess. Lumbar abscess. White swelling. Cretinism. 2. Tubercular peritonitis. 3. Hæmoptysis. 4. Tubercular meningitis.
2. Tabes Mesenterica,	
3. Phthisis (Consumption of Lungs,)	
4. Hydrocephalus,	
CLASS III. LOCAL DISEASES.	
ORDER 1.—*Nervous System.*	
III. 1.—1. Cephalitis,	III. 1.—1. Myelitis. 4. Monomania. Fright. Grief. Melancholia. Rage. 6. Hysteria. 8. Laryngismus stridulus. 9. Neuralgia. Ophthalmia. Otitis. Disease of spinal marrow. Necrencephalus. (Softening of Brain.)
2. Apoplexy,	
3. Paralysis,	
4. Insanity,	
5. Chorea,	
6. Epilepsy,	
7. Tetanus,	
8. Convulsions,	
9. *Brain Diseases,* &c.,*	

* Other diseases of the brain, or diseases of the nervous system, *not otherwise distinguished*, are referred to this head. *Mutatis mutandis*, the note applies to the corresponding heads in other Orders of this Class.

CAUSES OF DEATH—(Continued.)

TABULAR LIST.	SUPPLEMENTAL LIST.
CLASS III.—(Continued.)	
Order 2.—*Organs of Circulation.*	
III. 2.—1. Pericarditis, ...	III. 2.—1. Carditis.
2. Aneurism, ...	Endocarditis.
3. *Heart Diseases,* &c.,* . . .	3. Hypertrophia.
	Angina pectoris.
	Syncope.
	Arteritis.
	Hydropericardium.
Order 3.—*Respiratory Organs.*	
III. 3.—1. Epistaxis, ...	III. 3.—2. Œdema glottidis.
2. Laryngitis, ...	4. Empyema.
3. Bronchitis, ...	Hydrothorax.
4. Pleurisy, ...	Diaphragmitis.
5. Pneumonia, ...	Pneumothorax.
6. Asthma, . , ...	5. Pulmonary apoplexy.
7. *Lung Diseases,* &c.,* . . .	6. Grinder's Asthma.
	Miner's Asthma.
	Emphysema.
Order 4.—*Digestive Organs.*	
III. 4.—1. Gastritis, ...	III. 4.—1. Glossitis.
2. Enteritis, ...	Stomatitis.
3. Peritonitis, ...	Pharyngitis.
4. Ascites, ...	Œsophagitis.
5. Ulceration of Intestines, . .	5. Perforation of—
6. Hernia, ...	6. Congenital.
7. Ileus, ...	Femoral.
8. Intussusception, ...	Inguinal.
8. Stricture of Intestines, . . .	Scrotal.
10. Fistula, ...	Umbilical.
11. *Stomach Diseases,* &c.,* . .	Ventral.
12. *Pancreas Disease,* &c.,* . .	7. Constipation.
13. Hepatitis, ...	11. Dyspepsia.
14. Jaundice, ...	Pyrosis.
15. *Liver Disease,* &c.,* . . .	Gastralgia.
16. *Spleen Disease,* &c.,* . . .	Hæmatemesis.
	Melæna.
	Hæmorrhoids.
	14. Gall-stones.
	15. Cirrhosis.
Order 5.—*Urinary Organs.*	
III. 5.—1. Nephritis, ...	III. 5.—6. Cystirrhœa.
2. Ischuria, ...	7. Diuresis.
3. Nephria, (Bright's disease,) . .	Hæmaturia.
4. Diabetes, ...	Dis. of prostate.
5. Calculus, (Gravel, &c.,) . .	Dis. of bladder.
6. Cystitis, ...	
7. *Kidney Disease,* &c.,* . . .	
Order 6.—*Generative Organs.*	
III. 6.—1. Ovarian Dropsy, ...	III. 6.2. Orchitis.
2. *Disease of Uterus,* &c.,* . . .	Hydrocele.
	Hysteritis, (Inflammation of Womb.)
	Ovarian tumor.
	Uterine tumor.
	Polypus uteri.

* See Note under III. 1.—9.

CAUSES OF DEATH—(CONTINUED.)

TABULAR LIST.	SUPPLEMENTAL LIST.
CLASS III.—(Continued.)	
ORDER 7.—*Organs of Locomotion.*	
III. 7.—1. Arthritis, ...	III. 7.—1. Ostitis. Periostitis.
2. *Joint Disease,* &c.,*	2. Fragilitas ossium. Mollities ossium. Caries. Necrosis. Exostosis.
ORDER 8.—*Integumentary System.*	
III. 8.—1. Phlegmon, ...	III. 8.—1. Abscess (part not stated.) Boil. Whitlow.
2. Ulcer, ...	3. Roseola. Urticaria. Eczema. Herpes. Pemphigus. Ecthyma. Impetigo. Psoriasis. Ichthyosis. Tumor (part not stated.)
3. *Skin Diseases,* &c.,*	
CLASS IV. DEVELOPMENTAL DISEASES.	
ORDER 1.—*Developmental Diseases of Children.*	
IV. 1.—1. Stillborn, ...	IV. 1.—2. Atelectasis.
2. Premature Birth and Infantile Debility, ...	5. Anus imperforatus. Cleft palate. Idiocy.
3. Cyanosis, ...	
4. Spina Bifida, ...	
5. Other Malformations, ...	
6. Teething, ...	
ORDER 2.—*Developmental Diseases of Women.*	
IV. 2.—1. Paramenia, ...	IV. 2.—1. Chlorosis. Climacteria. Menorrhagia.
2. Childbirth. (*See* Metria I. 1.—9.)	2. Miscarriage. Abortion. Puerperal mania. Phlegmasia dolens. Cæsarian operation. Extra-uterine fœtation. Flooding. Retention of placenta. Presentation of placenta. Deformed pelvis. Breast abscess.
ORDER 3.—*Developmental Diseases of Old People.*	
IV. 3.—1. Old Age, ...	
ORDER 4.—*Diseases of Nutrition.*	
IV. 4.—1. Atrophy and Debility, . . .	

* See Note under III. 1.—9.

CAUSES OF DEATH—(Concluded.)

TABULAR LIST.	SUPPLEMENTAL LIST.
CLASS V. Violent Deaths.	
Order 1.—*Accident or Negligence.*	
V. 1.—1. Fractures and Contusions,* . .	
2. Wounds, ...	
3. Burns and Scalds, ...	
4. Poison, ...	
5. Drowning, ...	
6. Suffocation, ...	
7. Otherwise, ...	
Order 2.—*In Battle.*	
Order 3.—*Homicide.*	
Order 4.—*Suicide.*	
V. 4.—1. Wounds, ...	
2. Poison, ...	
3. Drowning, ...	
4. Hanging, ...	
5. Otherwise, ...	
Order 5.—*Execution.*	
V. 5.—1. Hanging, ...	
Violent Deaths, not classed, . . .	
Sudden, cause unascertained, . . .	

* Including "Railroad Accidents."

Note.—Cases of "infantile fever" are classed with those of typhoid, relapsing, and other continued fevers, under one name "typhus." Cases of "rheumatic fever" are classed with "rheumatism;" of "hemorrhage," and "abscess," with the diseases of the organs affected. Cases of "neglect" and "cold," except when the result of privation, (Class I. 3.—1,) are placed (with notes) under deaths by "accident or negligence," (V. 1.—7.) As "stricture of the urethra" is almost invariably the result of gonorrhœa, it is classed as I. 2.—2.
